III. Walkthrough 3

IV. Post Game Quest..... 41

I. Overview

This guide covers changes made to Saga 2 - A Haniwa's Contingency, along with in-depth tips and tricks to beating the game. In particular, it focuses on strategies for monsters and bosses, missable items, new abilities, equipment, and the new worlds. This guide assumes you have some basic knowledge of the game and know where to go next. If you don't, there are plenty of other guides online with this basic information. This guide instead focuses on changes made to the game along with advanced tips and tricks.

II. Character/Class Changes

The following is a list of character/class changes that might affect who you pick.

Mutants:

- Mutants now learn magic by eating meat dropped by monsters. This enables them to learn new abilities quicker while also letting you decide if/when the Mutant will lose that 4th ability.
- Besides the usual Fire/Ice/Thunder, Mutants have many new non-elemental abilities. These work on any monster regardless of their strengths/weaknesses. This makes Mutants much more useful against bosses compared to the original game.
- Mutants are very effective at healing the party. Besides the usual "Cure" ability, Mutants can also learn "Heal", which will cure the entire party instead of just one character at a time.
- Mutants no longer gain elemental weaknesses/affinities. X-Ice, X-Fire, and X-Thunder are gone.
- By using shields, Mutants can easily gain the defense stat. This means you could theoretically give them natural armor. It's very hard to boost the strength of a Mutant, however.

NOTE: There are optional patches to revert meat-learning as well as allow strength stat gains.

Monsters:

- This transforming class has been given a major overhaul in this hack. You no longer have to spend the whole game trying to transform into a Sprite/Fairy (although those are still great choices).
- There are many new monsters you can transform into, and lots of previously useless classes are now useful. For example, try turning into a frog to discover a potentially powerful move early on. Also check out the Dragon and Wyrn classes; they are not a let-down like they once were! Each monster class now has something useful about it.
- Having at least one monster in your party should offer a whole lot of fun, if not to at least see some of the new abilities and overworld graphics/sprites.
- The new Larvae monster at the starting screen replaces the Baby-D and is basically the same. It is just a fun new sprite!

Humans:

- Although this class is expensive to maintain and still needs quite a bit of training, they are potentially the best at taking down bosses.
- There are new weapons for humans that make them even more useful than before. Agility based weapons are still a great choice, but strength based weapons have been improved. You will be rewarded for purchasing those expensive swords and training the strength stat!
- Magic books should not be dismissed for Humans! They can in fact be made into good mages if you train them well. Humans can actually gain Mana faster than Mutants.
- Just like in the original game, Humans are NOT able to gain the defense stat very well.

Robots/Cyborgs:

- Robots are just as awesome as ever with their ability to recharge their weapons/inventory. They usually have the best defense and can be turned into walking terminators early on. They certainly make the first half of the game easier. However, Robots aren't always the best choice in certain battles/situations. They lack healing spells and magic use, and aren't as good at using swords as Humans (at least early on).
- There is a new class at the starting screen, which is a "Cyborg". Cyborgs are the same as a Robot, but have permanent "Recover" instead of "O-Mortal". This means the Cyborg has a "Recover" ability and will recover HP at the end of each turn. Some people might prefer O-Mortal for the fatal magic protection Robots get, but at the endgame Recover is more rare. Most endgame equipment blocks fatal magic, while recover is an ability that is near-impossible to obtain outside of the monster and mutant class.
- Having one Robot/Cyborg will make your playthrough a bit easier in general. However, having too many Robots/Cyborgs will make the game much harder later since you will lack healing/magic. A choice of 4 Robots will make the game VERY difficult to beat!

NOTE: The martial arts bug has been fixed with Robots/Cyborgs. This means you can no longer use up martial arts and retain the agility boost you get from it. This is a notorious bug in the original game that could make Robots extremely overpowered!

III. Walkthrough

World 1, Ki's World

First outside Area:

Monsters: Asigaru, Jaguar, Larvae, Gang, Skeleton, Goblin

- The first monsters you encounter deal more damage compared to the original game, but have less defense to compensate (you may notice the Colt dealing a lot of damage here; this will not be the case beyond world 1). Mr. S will wipe the floor with these monsters, as he should. Just have Mr. S use Fire when in trouble.
- You can have your characters gain a few stats while Mr. S is in the party if you desire – but it should be known that it's difficult to gain stats against the low level monsters found in this world. Your chances are much better in the coming worlds when you face higher level monsters. If you insist on attempting to gain a few stats, have Mr. S use Cure to keep your party going while your Human(s)/Mutant(s) use swords, bows, and magic to boost their strength, agility, and mana. If you fail to gain any stats, don't worry about it. You can easily beat this world by merely purchasing a few items and gear.

Monster Tip (level 1):

- If you have the Monster class in your party, the question will be whether or not you want to eat meat in the first world. There are some better level 1 monsters than there were in the original game, but it's also a pretty safe bet to keep your monster as-is until world 2. If you decide to eat meat, Fungus and Toad are not bad options since both have the Toxin ability that attacks/poisons a single group of monsters.
- If you know what you are doing, you can change your monster into something slightly better than a mere level 1 monster. There are various monster transformation guides online (search for FFL2MonsterEvo for my favorite). Although these guides have different names compared to this hack, they give you a pretty good idea of what to do.

Mutant Tip (level 1):

- Right off the bat, mutants have the chance to learn the following abilities/magic: Cure, Warning, Fire, Ice, and O-poison. You might consider keeping Cure on at least one mutant. You can pick up this ability at any point of the game, but it becomes much harder to learn later as your mutant gains access to more magic/abilities.
- **NOTE:** Mutants can no longer gain elemental weaknesses like X-Ice, X-Thunder, and X-Fire.

Robot/Cyborg Tip:

- For most of the game, focus on defense and agility with robots/cyborgs, especially if you only have one. Strength is a mostly useless stat for them until you get endgame weapons (discussed later in the guide).
- Enemies will attack the lead character the most, so if you have a robot/cyborg in the lead with high HP and defense, your party will hold up better. Load your robot up with armor and items to boost defense and HP.
- Remember, robots/cyborgs can equip multiple of the same piece of equipment! This means they can have 2 helmets, 2 body armors, 3 gloves, etc...
- Shields are a great choice for robots. Unlike other characters, robots gain a defensive stat from shields, plus they can use the shield to block attacks during tougher battles.
- Agility is a great secondary stat for robots so they can carry out their turn first before any of the enemies do. You will have a major advantage in battle if your robot is extremely fast!

First cave:

Treasures: X-Cure, Bronze Shield, Psi Dagger, Bow

Monsters: Asigaru, Jaguar, Larvae, Gang, Skeleton, Goblin

- The treasures in this cave should mostly go to a robot/cyborg if you have one – especially the Bow and Bronze Shield. The Cure could also be given to your robot/cyborg to boost their HP and to allow for 2 rechargeable uses. The Psi Dagger could be given to a Human or Mutant.

Wyrmling:

- The Wyrmling is no joke, but with Mr. S, you should be able to win in 1-2 turns. Just use his Dissolve or Fire for a quick win. No strategy needed!
- **NOTE:** Wyrmling can possibly drop level 2 Meat, which is not a bad idea to feed to your Monster or Mutant. For more information on level 2 monsters and magic, see the World 2 section!

First Town:

- After the first cave, Mr. S will depart, leaving you more vulnerable to enemies. Going straight to town to purchase Bronze gear is recommended.
- Give the character in the lead position a bronze shield to absorb most of the enemy attacks, since monsters will attack the lead party member the most. The robot/cyborg is a good choice for the lead character since you can easily boost their HP and defense by loading up their inventory.
- For weapons, you can purchase a Long Sword, Rapier, or Punch (if you didn't start with one) in order to train your Human(s). If you have a robot/cyborg, consider giving them a Rapier or Bow for an agility boost. The more expensive weapons and gear can be skipped for now, such as the Gold Glove (unless you really have extra GP to blow).
- **NOTE:** The Rapier causes more damage than Punch initially, but Punch will rapidly exceed it in terms of power after about 10 uses. It's really not a bad way to cause some decent damage. By the end of world 1, that punch should be dealing well over 100 damage while growing your Human(s) agility.

Human Tip:

- Unlike the original FFL2, agility based weapons are not always the best choice for Humans. Strength based weapons will begin to surpass the damage output of agility based weapons by about world 2. However, there are certain bosses/battles in which higher agility is necessary, so be sure to train both stats!

Ruins of the Ancient Gods:

Treasures: Whip, X-Cure

Monsters: Asigaru, Jaguar, Larvae, Skeleton, Goblin, Toad, Fungus, Lizard, Fly, Slime (1/16 chance in final inside room only)

- As long as your party has bronze gear and basic weapons, this should be a breeze.
- If you have a monster or mutant with a group attack ability, kill any groups of flies, lizards, or slimes you encounter for some quick gold. If you have the patience, fight some extra flies, lizards, and slimes on the fourth floor. With some luck, you will be able to afford the incredibly useful "SMG" weapon for your Robot after the ruins in the coming town.

MAGI Tip:

- Don't forget to equip MAGI on your characters right away!
- Nearly all MAGI can now be used in-battle as an item, weapon, or spell. You have to scroll all the way to the bottom of the inventory list in-battle to see it. For example, if you equip Defense MAGI, you can use it as a shield in-battle. Speed MAGI will give you an agility boost for that one battle. Fire/Ice/Thunder MAGI will grant the corresponding spell. See the MAGI document for more info on each!
- For Humans, consider either the speed or power MAGI, depending on their weak point. For example, if your human is gaining more strength, give them the speed MAGI to boost agility. If they have gained more agility, give them the power MAGI to boost strength. You can also just focus on agility and ignore strength altogether, but later on this strategy won't allow your human to deal max damage with the more powerful strength based swords coming up.
- For Mutants, the mana MAGI makes the most sense, unless you have them doing something other than using magic...
- For Robots, consider the defense Magi – especially if they are the lead character. This will make them even more indestructible. Another option is the speed MAGI so they strike first (especially once you obtain an SMG).

- For monsters, the best MAGI depends on their category. For example, if you have a monster that needs more defense, give it the defense MAGI. If you want it to attack first, give it Speed MAGI.
- **NOTE:** Despite rumors you may have heard, MAGI will NOT effect how fast your characters gain stats. It is true that stat-boosting gear will reduce the chances of gaining stats at the end of a battle, but MAGI has no such downside.

Second Town:

- Most expensive items in this town can be ignored for now. The exception is the SMG, which you should purchase the moment you have enough GP. Once you do, give the SMG to your Robot/Cyborg. If you don't have a Robot, give the SMG to a Human or/or Mutant and use it sparingly (only target large groups of monsters).

Robot/Cyborg Tip:

- Try combining the SMG with gear that grants higher agility (Bows, Rapiers, Punch, etc). Your robot/cyborg will be able to wipe out a whole group of monsters with the SMG before the monsters even get a chance to attack!

Ashura's Base:

Treasures: Speed Potion, Silver Gauntlet, Axe

Monsters: Asigaru, Jaguar, Larvae, Skeleton, Goblin, Toad, Fungus, Lizard, Fly, Slime

- Monsters will be in larger numbers here, but having Ki as your guest should make it easier.
- If you need more GP in order to purchase weapons like the SMG, try "talking" to the zombies in the first area to encounter groups of slimes and flies for some quick gold. Use Ki's thunder book to obliterate these monsters quickly.
- **Note:** As of version 2.0, many monsters throughout the game such as Slimes have a chance to drop items as well as meat. Sometimes these drops can be stat boost potions, although rare. There is a separate document containing a list of all the drops, arranged by world.

Assassin:

- The new mini-boss at the end of Ashura's base is an "Assassin". Don't take this guy lightly! The Assassin will kill one character each turn without fail unless you block the attacks.
- It's possible to win by just attacking and losing a few characters (as long as Ki stays alive), but the safer strategy is to have the lead party member use a bronze shield every turn.
RARE DROP: If Assassin drops an item, there is about a 50% chance it will be a Kimono. Even more rare (less than 15%) is a Katana. The rest of the time will be a Long sword.
- The Kimono armor cannot be obtained for a little while and offers a nice agility boost. The Katana is also nice should you be lucky enough to get one, and is the most powerful sword for 2 more worlds to come.

World 2, Desert:

Outside Area:

Monsters: Zombie, Flan, Beetle, Eagle, Scorpion, WereRat, Pebble, Wyrmling, Snake (rare, 1/32 chance)

First Desert Town:

Monsters: Trooper, Scorpion, Eagle, Snake, Flower, Pebble, WereRat, Wyrmling (rare, 1/32 chance)

- Beware of the Troopers and Pebbles here. When you first arrive, they will deal some major damage. Have your lead party member use a shield to block these attacks.
- If playing on Lunatic or Insane skill, Zombies can use Curse. Be sure to purchase a Curse potion or two.
- Pick up the Silver gear in the item shop as soon as possible. The Silver Armor is available right away, although it might be too expensive initially.
- If you have extra GP, consider purchasing a Kick at the weapon shop. The Kick will deal decent damage after about 10-15 uses.

- NOTE: If you happen to get either your Kick or Punch down to just one single use, save it for the upcoming boss. It will pack a huge punch (no pun intended).

Robot/Cyborg Tip:

- As mentioned earlier in the guide, robots/cyborgs can equip as many gloves/helmets/armors as you wish. However, unlike the original game, they *do* actually benefit from higher end gear!
- With the exception of the Bronze series, robots will always gain more defense from higher priced gear. For example, the Silver Helmet grants a robot 2 more defense points than the Silver Glove, while the Silver Armor grants 4 more. This means you will sometimes want to purchase that more expensive body armor instead of a bunch of cheap gloves. You could even equip your Robot with more than one piece of body armor for maximum defense, but this would get very expensive...

Monster Tip (level 2):

- World 2 has better monster transformations than world 1, but that is if you haven't already transformed into a better monster using some clever meat eating. Some good monsters include the following:
- Pebble, which is great for defense. If you pick a defensive monster like Pebble, it's a good idea to place them in the lead position if their defense is higher than other characters (like the robot).
- Red Bone has good attack power.
- Wyrmling has a lot of HP and good attack power.
- Scorpion has a new ability called "SndStorm" (Sandstorm). SndStorm attacks all monsters and ignores their elemental properties. It is similar to Acid, although it does not cause poison and cannot be blocked via poison immunity.
- Nautilus is another good choice with the Acid ability.
- **TIP:** If you kept the starting monster Larvae until now, you may eat the meat of a Were-Rat to turn into a Medusa. You can then eat the meat of an Eagle to turn into an Obake, then the meat of a Snake to turn into a Sprite. This path is slightly different than the original game, but gets you the best monster for at least the next 3 worlds...

Mutant Tip (level 2):

- Now that you are fighting level 2 monsters, your Mutant(s) can learn level 2 magic such as Thunder, O-Death, and O-Fire (you can also continue to learn level 1 magic as well). Thunder is arguably the best elemental magic attack, since very few monsters are immune to it. It is definitely worth giving up one of the four magic/ability slots to retain thunder.

Second Desert Town:

- As of version 2.0, the desert world is slightly different. To navigate it, merely follow the cactuses to a path leading through a cactus forest on the far south end of the map.
- Now is a good time to stock up on some cure potions to get through Ashura's Tower. You may also consider some eyedrops, since some of the monsters coming up can blind you.
- The Battle sword and Sabre can be purchased, but you don't really need to unless you have more than one human. You will be getting one of each for free in the Tower coming up. If you have a human or mage with high agility as well as mana, consider a Psi Sword.

Ashura's Tower:

Treasures: Sabre, Axe, Colt, Silver Shield, Magic Potion, Power Potion, Silver Helmet, Battle Sword

Monsters: Zombie, Flan, Scorpion, Beetle, Eagle, Pebble, WereRat, Wyrmling, Snake, Trooper, Flower, Nautilus, Red Bone

- The monster you need to be careful of around here is Red Bone. They can deal a lot of damage and have o-Weapon. Consider having your lead party member use a shield. Wyrmlings can also be a threat in large numbers. This is where the SMG really comes in handy.
- It might be a good idea to give the Silver Shield to the Robot to maximize their defense. Replace that old Bronze Shield if you have no more inventory slots left. If you have no Robot, give the shield to the party member in the lead position.

Woodman:

- The Woodman fight can be a challenge if you have a weak party. He has a lot of HP and can deal some decent damage. Have your lead character use a shield if you must. Woodman is weak to Fire, so have one of your characters use Fire/Flame if you have it.
- **NOTE:** Woodman can drop level 3 meat, which has a chance to teach your Mutant a level 3 ability or upgrade your monster to level 3. See the section in the next world for more info on level 3 monsters and Mutant abilities.

Mask:

- Please note that Mask is NOT automatically equipped with the axe like he is in the original game. Instead, you will obtain the axe and must equip it through the menu. Or, you can always keep the axe and give the Mask something else. If Ashura is too hard, consider giving the Mask a Battle Sword. This will cause more damage than the Axe each turn. Just know that once you equip it on the Mask, you can't get it back.

Ashura:

- The fight against Ashura can involve a little luck. If Ashura decides to use Flame repeatedly, you probably won't survive. On the other hand, this battle can be easy if Ashura decides to keep attacking your lead character and you have a shield. This is the time to use your SMG, Battle sword, and Punches/Kicks (if you used up enough of them).
- Your Mutant(s) should stick to healing, but if you feel you must attack, have them use a PSI sword if you bought any. The Mask will be the one who wins this battle for you (mostly).
- If you have trouble winning, consider giving the Mask the Battle Sword instead of the Axe for more damage. If you just so happen to have a monster in your party with Stone, this will instantly kill Ashura.
- Ashura has about 1,700 HP on insane skill, with about half that on Average skill and somewhere in the middle with veteran skill.
- **DROP:** There is a 20% chance Ashura will drop one of the following items: Axe, Giant Glove, Geta, Power Potion.

World 3, Giant's Town:

Outside Area:

Monsters: Ammonite, Triceras, Fiend, Oni, Worm, Terrorist

Town:

- There is a lot to buy here, but the problem will be having the gold to afford it all. You should probably skip purchasing the Giant's Armor and Helmet due to how outrageously expensive they are at this point of the game (return later if you manage to get a boatload of gold). Instead, here are some alternative purchasing options:
- Gold Bow for your Robot(s), which has a nice agility boost and deals decent damage.
- Katana for your Human(s), which is a nice step up from the Battle sword (more so than in the original FFL2).
- Geta Boots for your Human(s) and/or Mutant(s), for the strength boost and extra help with defense (you will also get another pair in Giant's town for free).
- Giant's Glove for your Human(s) if you can afford it, for the awesome strength and defense boost. If you aren't even close to affording a Giant's Glove, consider purchasing the less expensive Gold Glove if you are lacking in defense.

Armor/Gear Tip:

- You should keep in mind that equipping stat-boosting gear will slightly reduce the chances of a character gaining that stat at the end of a battle. The higher the stat is, the lower the chances are of gaining that stat. Since giants gear boosts strength a lot, it will lower the chances of gaining a Strength stat at the end of a battle. That said, it's still probably worth the sacrifice to get the benefits of the giants gear on a Human using strength based weapons. Later on, if you wish to max out stats, you can just remove stat-boosting gear.

Monster Tip (level 3):

- There are a few good monsters to transform into at this point. The Worm has Sandstorm similar to the Scorpion, and both the Ammonite and Crab have Acid. Woodman and Triceras are also good choices for their large amount of HP and high attack power. Fiend comes with the "Fire" ability, which is ok. Oni has Ice, which the upcoming boss is weak to. If you are lacking in the defense department, Cobble or Woodman are decent choices. The best monster to have against the upcoming boss is Red Bone, since it can use defense as well as reverse the effects of "Absorb" with its undead status. More info on that in the upcoming boss section.

Mutant Tip (level 3):

- Mutants can now learn StonSkin, O-Ice, and Steal in this world. StonSkin can have its uses if you know which monster it will work on. That said, you can probably pass up on retaining these level 3 abilities unless your Mutant is lacking other, more useful abilities like Cure, Thunder, Fire, Ice, etc..

Robot/Cyborg Tip:

- If your Robot has started to decline in the agility department, give them a Gold Bow or two. That should allow them to strike first and wipe out a group of foe with the SMG before they get a move. The Gold Bow is also good vs. monsters with high HP.

Giant's Town:

Treasures: Gold Shield, Geta Boots

Monsters (inside buildings): Silver, Crab, Robo-M, Terrorist, Worm, Fiend, Ammonite, Oni, Triceras

- Watch out for Silver, Crab, and Robo-M inside the houses. At this point, they are fairly powerful. Consider using a shield, and if you have robots in your party, take out Robo-M first. On the plus side, Robo-M can sometimes drop an R-Punch, or even more rarely an SMG.
- Robo-M has a chance to use ComVirus - an attack that could wipe out your robot in a single hit. ComVirus is an ability you should expect to see throughout the game, especially when fighting against other robots or humans. ComVirus will only work on robot/cyborg characters, so your other party members will be immune.

Ki's Body:

Monsters: Plasma, Grippe, Worm, Crab, Silver, Robo-M, Oni, Ammonite, Fiend, Triceras, Woodman, Terrorist, Cobble, Assassin

- It might be a good idea to tackle Ki's Body in parts (no pun intended). Although you can probably make your way through the whole thing in one shot by running from encounters, there are some great chances to earn gold here. Some groups of monsters give 1,000+ gold in a single battle. On top of that, you might get some nice drops from Assassins, Robo-M, and Terrorists (mostly items to sell). Consider completing about half of Ki's Body, exit to Giant's Town to purchase better gear, then return back to Ki's Body.
- Ki's body has some very dangerous foe. In particular, you will encounter the Assassin - sometimes in groups of 3. The Assassin can deal 100+ damage with the Katana if your defense is low – so a shield is recommended on your lead character. You will also encounter Woodman in large groups with other monsters, which can be a very lengthy battle.
- If you don't have a Human in your party, consider bringing some Gold Bows, which can deal 200-300 damage per shot. A Mutant can finish off the standing monsters with group-based abilities.

Human Tip:

- Humans will begin to show their potential at this point with strength based weapons. A Katana with a Giant glove and Power MAGI equipped should allow you to deal around 400 damage, which can kill an Assassin in one hit. The SMG could take 2-3 shots to bring down an Assassin. Humans should focus on attacking monsters with higher health like Assassin, Woodman, and Triceras.

Invader:

- Ki's Body has a new boss fight: "Invader". This boss is weak to Ice magic, although all magic will deal damage except poison, death, and stone. If you bought a Gold Bow or two, use them.
- If your Human(s) have a Katana, now is the time. For your Mutant, use Ice if you have it; otherwise, use any powerful magic (thunder, fire, etc.)
- You might not have time to heal much in this battle, since it's possible the boss can take out weaker characters in one hit. Instead, focus on damage and only heal when you think it will make a difference.
- The move you especially have to watch out for is "Gas", which can damage your whole party and cause poison. Other attacks include Absorb, Acid, and ComVirus (only works on robots).
- Have your lead character use shields, and consider purchasing more Gold Bows if you struggle to win this.
- If you have a monster in your party, consider transforming into Red Bone and put the monster as the lead character. Have Red Bone use Defense every turn. This will block the "Head" attack and reverse the effects of Absorb (it will steal HP from Invader and give it to the Red Bone).
- Invader has 2,250 HP in insane difficulty (600 in easy difficulty).
- **Meat/Drop:** Invader can drop level 4 meat, although you will be encountering regular level 4 monsters in the very next world. There is also a 20% chance invader will drop a Body Potion, Power Potion, Magic Potion, or Speed Potion.

World 4, Apollo's world:

Outside Area:

Monsters: Big Eye, Kelpie, Griffon, Moth, Tortoise (Rare, 1/32 chance), Raven (rare, 1/32 chance)

- In the immediate outdoor area, you will want to be cautious around Griffon. Although one Griffon probably poses no threat to you at this point, you will want to use your powerful single-target moves like Katana, Gold Bow, etc, since Griffon has a lot of HP.

Monster Tip (level 4):

- There are many good Monster choices at level 4. Drake comes with the new "Scorch" ability and has high HP. Griffon has unrivaled strength by this point of the game and the most HP, but lacks a group attack ability. Both the Hunter scorpion and Big Eye are very good choices for their sandstorm ability. Big Eye has very high mana and agility, but lacks defense. Hunter has high defense, but just average mana and agility. Jelly and Moth both have the group attack Toxin, but Jelly has a fire weakness. Tortoise has the best defense by far and comes with Acid, but the tradeoff here is low agility and mana. Hofud is not all that bad with defense either, but lacks a group attack. The choices here are plentiful.

Mutant Tip (level 4):

- At this point of the game, your mutant can learn the valuable "Scorch" ability. Scorch deals the same damage as Fire/Ice/Thunder, but will work on any monster or boss regardless of their elemental properties. Although most monsters at this point of the game are not immune to elemental magic, Scorch will be useful against bosses. It's worth retaining Scorch in one of your four magic/ability slots for this reason. Other possible skills learned at level 4 include O-Stone and O-Thunder.

North Town:

- The Great sword is a good choice for your Human and is a decent upgrade over the Katana, but you can get one for free coming up.
- If you have the gold, consider purchasing a Laser Dagger for a Robot for an agility boost and some good damage. There is a free Laser Dagger coming up, but not until the end of the world, and it can always be stacked. Replace older items (keep that Gold Bow for now).
- Musket is a good choice if you find yourself struggling against bosses
- Headbutt should only be purchased if you have enough gold and are low on martial arts.
- Chainsaw won't benefit you much yet, but it's a very interesting weapon to keep in mind. The chainsaw will instantly kill ANY monster in one hit if your strength is slightly above the defense

of the monster – EVEN if it's immune to fatal magic! This will also work on a few mini-bosses. This is brought up again later for those bosses not immune to the Chainsaw.

- If you don't have any softs yet, purchase some. You will encounter Medusa in the coming areas.

South Town:

- If you never got a Kimono drop from the Assassin, and if you find your Human(s) or Mutant(s) lacking in the agility department, consider purchasing a Kimono.
- The Gold Helmet should only be purchased if you could not afford the Giant's Helmet, are lacking in defense, or have the extra gold to spend.

Undersea Volcano:

Treasures: Power Potion, Great Sword, Fire Book

Monsters: Tortoise, Raven, Drake, Griffon, Ghoul, MapleMan, Jelly (rare, 1/32 chance in any room, or 1/16 chance in final room)

- Starting Apollo's world with the undersea volcano is recommended, since it is shorter and grants a few good free weapons.
- Beware of the large Drake and Tortoise groups at the end of the volcano. Target the Drake first, since it can use Scorch, then target Tortoise. If you have lots of powerful target-all moves like Flame/Blizzard/SndStorm/Acid, use them.

TrueEye MAGI Note:

- In the original FFL2, this MAGI did nothing besides allow you to see in a certain cave coming up. That is no longer the case! Now if you equip it on a character, you have the option to use it in-battle. Doing so will increase your agility 15 points each turn. You can use the TrueEye 3 times before it must be recharged. This is fantastic for boss fights, since an agility boost means your character can hit better, deal more damage with agility based weapons, and dodge better. This is probably best if given to a Human, although you must sacrifice their Power and/or Speed MAGI (it is worth doing so with certain boss fights).
- **NOTE:** In the original game, the SpeedUp potion boosted agility. It has now been scrapped in favor of a more useful TrueEye MAGI.

Cave of the Wind:

Treasures: Hermes Shoes, R-Punch, Elixir

Monsters: Big Eye, Jelly, Hunter, Chameleon, Hofud, Medusa, Keplie, Griffon, MapleMan

- Dunatis is much harder this time, which is why it was suggested visiting the Undersea Volcano first. You will want to go in the south cave first if you want the Hermes shoes. Equip them on whoever is lacking agility - especially a Human if they keep missing.
- In the main cave section (north side), you will want to take out Jelly and Medusa with group attacks quickly. They have high agility and can often get a first strike. This means the possibility of getting turned to stone.
- If you are low on gold, the lower floors of this cave are a great way to earn. You will regularly encounter large groups of Jellies, Big Eyes, and Medusas - all of which drop a lot of gold.
- **WARNING:** once you go down the slope on the last floor, you can't return without facing Dunatis! Be sure to save before this point.

Dunatis:

- Dunatis is not the pushover he once was. That is UNLESS you have a Monster/Mutant with StonSkin and manage to use it against Dunatis.
- SMG is the primary attack of Dunatis, which is actually not that bad against a well defended party. The second attack is Chainsaw, which is more dangerous. This can instantly kill a weaker party member
- The 3rd and 4th possible attacks are a Laser Dagger and Blitz whip. These attacks can also kill someone in one move if they have low defense.
- Unless you are confident enough, have your lead character use a shield (a Gold Shield if they have one).

- Have your Human(s) use their best swords - hopefully a Great sword if they have one. If not, use Gold Bows, Laser Daggers, or the most powerful abilities with the Mutant(s)/Monster(s).
- **NOTE:** In case any experienced players are wondering, Dunatis will no longer teach any advanced abilities to Mutants (like he did in the original game) since he doesn't drop any meat. If you have the optional patch applied for vanilla behavior with Mutants, Dunatis can in fact teach abilities, but nothing beyond level 9. You won't be learning Flare or other endgame spells.
- **Drop:** 20% chance of dropping Grenades, Power Potion, Speed Potion, Body Potion, SMG, Chainsaw, Laser, or Blitz Whip.

The Cave of Light:

Treasures: Power Potion, Giant Gauntlet, Thunder Book, Laser Dagger, Revenge Sword

Monsters: Medusa, Hofud, SabreCat, Big Eye, Drake, Tortoise, Raven, Griffon, Kelpie, MapleMan, Moth, Ghoul

- Most of the dangerous encounters in the previous dungeons can be found here, but in larger groups: Medusa, Jelly, Drake, and more. You will also find SabreCat, which is new to this dungeon. SabreCat can sometimes use 2-bites, which is deadly on a character with low-defense and/or HP.
- **NOTE:** The Revenge sword does more damage in this hack. If the monster that harms you does 0 damage, your counter attack will still be about the equivalent of a Great sword. If the monster deals damage to you, the Revenge sword can easily dwarf the damage caused by any other weapon. Also keep in mind this means the Revenge sword has the potential to be good even later in the game. In fact, there is a way to get more Revenge swords later...

World 5, Guardian's Town:

Shops:

- In the weapon shop, consider purchasing Grenades. Unlike the original game, you get to use grenades longer.
- The Jitte is also a good purchase. It is an agility based weapon one step above the Laser Dagger in damage, and also has a 33% chance to block attacks while using it. Both the Jitte and Grenades are good on the Robot, since the Jitte offers a nice agility boost, and the Grenades allow the Robot to continue taking out groups of monsters in a single turn (SMG won't be doing that anymore at this point). Humans are also a good choice for the Jitte if your Robot is already equipped well enough.
- In the item shop, the Gold Armor is a good purchase for your lead party. The Kimono may still be a better choice at this point for Human(s) thanks to the agility boost, but not if your Human is in the lead position.

Gardian's base attacked:

Monsters: Robo-Z, MechBug, Pirate

- This portion of the game can be difficult if you aren't prepared. Most regular monsters here use guns, rockets, and even the occasional beam. The trick is to take out these monsters as fast as possible, or run away if you must. Focus on the Pirates first, since their Muskets can deal some serious damage. Robo-Z is also a threat, followed by Mechbug. Use group attacks wherever possible.
- If you aren't getting slaughtered, this area is a decent way to gain some extra gold. Just about every monster here has the chance to drop something worth selling. This includes the Musket, R-Punch, SMG, Blitz whip, and Colt.
- **NOTE:** There are several level 6 mini-bosses in the Guardian base sequence that may drop meat. You can possibly learn level 6 magic or upgrade your monster to level 6 by eating this meat. Read the Venus World section for tips on Level 6 magic and monsters. Otherwise, the regular encounters here are level 5, which is discussed instead.

Mutant Tip (level 5):

- Your Mutant(s) may now learn Remedy, Surprise, and Mirror. Anyone familiar with the original game will remember Mirror as being an endgame skill; now it is a level 5 skill instead. Mirror will reflect magic back to the enemy, and can be pretty useful mid-game.
- Remedy will remove any status ailment (it used to be called Heal, which was confusing since it sounded like it would Cure your party).
- Surprise will allow your party to sometimes get the "Strike First" status upon entering a battle.
- It's really debatable if you wish to retain any of these abilities. None of them are mandatory, but all three have their uses. If you have multiple Mutants in your party, these abilities are definitely worth keeping.

Monster Tip (level 5):

- The very desirable Sprite monster is now available, which comes with Cure, Thunder, and Sleep. This is a safe choice as far as monsters are concerned, but there are also other monsters to consider.
- The BaneToad comes with Biochem - an advanced ability that deals fixed damage ranging anywhere from 200-600. This ability is a boss killer to say the least. BaneToad also comes with the Gas ability, which targets all monsters. The only downside is the lower stats that BaneToad has.
- WereWolf has Accel, which will boost agility similar to the TrueEye. Technically, WereWolf has the capability of dealing more damage than any other level 5 monster if you use accel 3+ turns in a row and proceed to attack with Claw (which is an agility-based attack).
- Hatchling is a good choice with high HP, good stats, and the group attacks Flame and Scorch.
- Turtle is a great shield with insane defense if you are lacking a good lead party member
- Obake is not bad if not just for the incredibly high ability and Touch ability.
- The following monsters are also good secondary choices: Harpy, Thunder, and BaneWorm - all of which come with group attack abilities. Clayman has decent defense and HP, but lacks a good group attack. Hornet has Cure and Absorb, but not much else. LiveOak also has cure.

Ogre mini-boss:

- This mini-boss fight is not overly difficult. Ogre has a high amount of HP and decent strength, but has no group attack to speak of. You should win this battle unless your defense is very poor.

Recruiting Dad/Captain:

- This time around, you get to keep Captain for a bit longer. For this reason, you can consider equipping extra equipment on him if you don't mind losing it forever. If you have extra gear sitting around such as gloves, helmets, or boots – feel free to give them to the Captain.

Warrior mini-boss:

- This battle should be easy with Captain in your party. Just use your most powerful attacks, including Captain's Great Sword. Warrior could possibly kill one or two of your party members with Saw, but you should still win.

Magician mini-boss:

- This monster can be a huge threat in larger numbers later on, but thankfully there is only one Magician to compete against here. The battle should be over fairly quickly unless you diddle-daddle.
- **Drop:** The Magician has a 20% chance of dropping one of the following: Magic Potion, Fire Book, Ice Book, Thunder Book, Holy Book, Fog Book, Cure Book

Commando mini-boss:

- This mini-boss has the potential to be the toughest of the bunch, since the Commando can get a strike first. The commando can also potentially kill one character each turn. However, even with approximately 500 HP, you should be able to win in one round.
- **Drop:** There is a 20% chance of the Commando dropping one of the following: X-Kick, FlameTw, Grenade, Magnum, Bazooka. The Bazooka and Magnum cannot be purchased for a few worlds still and are decent at this point.

World 6, The Lost City:

Outside Area:

Monsters: Turtle, LiveOak, Mushroom, Chafer, Harpy, BaneToad, Pirate, Robo-Z (rare, 1/32 chance), MechBug (rare, 1/32 chance)

- Welcome to the newly expanded world 6! If you walk south from the pillar of sky through the mountains, you will reach a town. None of the monsters here should be overly challenging except the occasional Pirate that you are already familiar with from the Guardian's Base.

Traveller's Town:

- This town is small, but there is a weapon shop, item shop, and Inn. Make sure to visit the Inn to have a brief conversation with two survivors of the Guardians.
- The people around town will tell you about a supposed Lost City, which of course you will be looking for.
- The town has the same weapons as the Guardian's Base. If you haven't purchased Grenades or a Jitte yet, consider doing so now. If you don't have Gold Armor or better on your lead character yet, consider purchasing one.

Swamp:

- Head south from the town, and you will see what looks like a dead end in the trees, but with a path. When you walk into those trees, a swamp will appear. Right away, you will notice creatures running around. These are Sahagins, and will attack if you bump into one.
- Sahagins are level 6 monsters, which is a bit advanced at the moment, and you cannot run from them. The main threat is their high agility and 1/3 chance of using Acid. If you get unlucky enough to have them use Acid several times in a row, it could be game over. If you bump into any Sahagins, use your Grenades and group attack moves to end the battle quickly.
- **Note:** Sahagins can drop level 6 meat for your Mutant and/or Monster. Read the next world section for more info on level 6 monsters and abilities.
- The swamp has several passages, but is not really a maze. It doesn't matter if you go west or south to begin with, since it's a circle that takes you to the same place. If you go too far west,
- you will come up to a small dead end. Instead, go south after the circle. There is only one path to take once you head through the narrow passage in the trees going south, which will eventually bring you out of the swamp.

Byakko:

- As you are about to exit the swamp, your path will be blocked by Byakko, a new villain and side-character. Byakko has up to 1,750 HP (in insane difficulty), O-Weapon, and high agility.
- Byakko is immune to all elemental magic as well as poison, death, and stone. You may find your most powerful weapons dealing lower damage than usual thanks to Byakko's O-Weapon.
- The biggest threat in this battle will be Madsong, which will confuse anyone that does not have O-Death. Only certain monsters and the Robot will have O-Death at this point of the game (but not a Cyborg). The following level 5 and level 6 monsters have O-Death: Mushroom, Champgno, LiveOak, Clayman, and SunPlant.
- Consider using the TrueEye MAGI to boost agility to win this battle. You can do this with Robots/Cyborgs, Humans, or a Mutant (if they have trained in agility). You can use the TrueEye up to 3 times followed by the Jitte for good damage - even if a character has low base agility.
- The lead character should use shields and/or the Jitte to block Byakko's physical attacks.
- A great monster ability here is Biochem, which is only obtainable by having either a BaneToad (level 5 monster) or a Champgno (level 6 monster). Biochem can do between 200-600 damage.
- You can also win this battle slowly by using grenades and/or guns every turn and healing often. Captain can use his Great sword, although it will likely miss much of the time. This strategy will involve some luck and hope that Byakko does not use Madsong often.
- **Tip:** If you have a character with strength above about 55 + Power MAGI, you can kill Byakko in one hit with the Chainsaw! This is easier to pull off with giants gear equipped and/or a Robot loaded with swords.
- **Drop:** Speed Potion (1/10 chance), Quick Armor (1/30 chance)

Lost City Temple:

Treasures: Power Potion, Speed Potion, Magic Potion

Monsters: Turtle, LiveOak, Mushroom, Chafer, Harpy, Robo-Z, Pirate, MechBug

- Once you arrive in the Lost City North of the swamp, you should go straight to the largest temple to the North. This is the only building you can enter. Once inside the temple, go either to the left or right before entering the covered room directly in front of you. Otherwise, you would miss treasure (you can return later, but it's a lot of walking).
- Once you get the treasure, enter the covered room. A cutscene takes place, and you will have to fight a mini-boss.

Yojimbo:

- This new boss has a substantial amount of HP (2,500 on insane skill, or as low as 800 with Average skill) with some fairly high stats. The Yojimbo can easily kill your characters in a single hit if you let him - which is why it's a good idea to use a shield or Jitte.
- The good news is that Yojimbo has very low defense. The trick is hitting him since his agility is very high. You can use the TrueEye MAGI to speed someone up as you did against Byakko. Once you have a fast character, you can start landing all those hits.
- Yojimbo is immune to Stone, death and the Chainsaw – so don't bother attempting it.
- **Drop:** Yojimbo has a 1/6 chance of dropping a Nodachi, which is a powerful sword at this point of the game. There is also a 1/12 chance of Yojimbo dropping a Ninja Glove, Speed Potion, or Katana. Ninja Glove would be the best drop you can get, but your chances are not great...

World 7, Venus World:

Outside Area:

Monsters: WereWolf, Clayman, Hornet, BaneWorm, Obake, Sprite, Stranger (rare, 1/32 chance), Thunder (rare, 1/32 chance)

- It should be noted that the monsters in the overworld are still in fact level 5 monsters. Later in Venus World, you will be encountering level 6 monsters.
- Sprites, although low on health, can be deadly if they manage to cast sleep on multiple party members and/or use Thunder. Obake can likewise use Sleep and the deadly "Touch" ability. The bigger issue is the high agility of these monsters and their tendency to strike first.
- It would be wise to have a character with high agility at this point. A Robot with Speed MAGI and Grenades should kill a group in one attack before they can make a move.

Venus City:

- There is a lot of important gear in this city. The item shop on the West side of town has all the Giants Gear as well as the brand new "Quick" gear.
- The new Quick gear has similar defense as the Giants gear (except the armor, which is 2 points lower). The difference is the Quick gear will boost agility rather than strength. For Robots and Mutants, consider purchasing the Quick Gear and focus on agility, which will give you the advantage in this world.
- For Humans, you may need a combo of Quick gear vs. Giants Gear. If your Human(s) keep missing all the time, give them more Quick gear. If they are hitting but dealing little damage, give them more Giants gear.
- The Flame shield should not be dismissed if you have extra gold, since it can block Fire/Flame used by multiple monsters coming up.
- The weapons shop has quite a few interesting choices, but not all of them are absolutely necessary. The Flamethrower (FlameTw) is a slight upgrade over the Grenades, but you will get one for free coming up. Likewise, you will also get a free Flame Sword. If you have extra money to burn, an Ice Sword isn't a bad choice, since many monsters coming up are weak to Ice.
- X-Kick is a good choice if you are low on agility-based weapons and need to grow your Human and/or Mutant agility stat, but again not completely necessary if gold is a problem.

- The Magnum causes decent damage on a single target, but is probably only necessary if you have a mostly Robot/Mutant team that is lacking strong attacks. Humans should be dealing more damage with swords by this point.

Shield Tip:

- Magic shields like Ice/Flame/Dragon will block enemy magic for the entire party the entire battle. You only need to have one character use the shield at the start of the battle, and the party will be protected the remainder of the battle. Also note that shields block the same element (unless you applied the optional patch to block the opposite element), so an Ice shield will Block Ice, and a Flame shield will block Fire.

Sewers:

Treasures: Speed Potion, PSI Staff, Giant Helmet, Elixir

Monsters: Stranger, Thunder, Orc, Hatchling, WereWolf, Clayman, Hornet, BaneWorm, Obake, Sprite

- Beware the Orc in here, as his Great sword can deal a lot of damage. Consider using a shield or Jitte to block its attacks. The most difficult encounter is likely the Orc and Obake together, since the Obake can strike first and put your party members to sleep and/or use Touch. Take out the Obakes first with grenades, then focus on the Orcs.
- Hatchling is another tough monster, since it can use Flame on your entire party. It can also use Scorch to inflict damage on characters regardless of their elemental immunities. The Hatchling can have up to 500HP (insane difficulty). If you have a Flame Shield, consider using it when fighting the Hatchling to protect yourself against fire.

Demon mini-boss:

- This fight is optional if you try to obtain the treasure box on the lower right in the room with 4 treasure boxes. You can also fight this mini-boss as many times as you please. Demon is by itself, so the battle shouldn't be that hard.
- Demon is a level 7 monster and can drop meat, so it's not a bad idea to fight a few times in an attempt to turn your monster into something awesome, or to possibly teach your Mutant level 7 magic. Some nice level 7 monsters for the upcoming boss include Mosquito (with the biochem ability) Gazer (Beam), Wyvern (Scorch), and Demon (Scorch). Check the Edo world section for info about other level 7 monsters and Mutant magic!

Volcano Ruins:

Treasures: Magic Potion, Flame Sword, FlameTw, Storm Staff, Flame Shield

Monsters: Cherufe, Hatchling, Ogre, Champgno, Warrior, Mantcore, SunPlant, Komodo, Centros, FireMoth, Serpent, Magician

- This area is a big step up in difficulty - especially if you aren't prepared. By this point, you might consider having Giant gear or Quick gear for at least your top 2 characters, and also consider a Flame shield for your lead character to block with. Also consider purchasing a handful of X-Cures before proceeding.
- If you have a mutant or monster with Blizzard or Ice, these will obviously be good abilities for this cave. Lightning will work against everything, even though none of the monsters are weak to it. If you have the Scorch ability, it will work just fine since it's not actually fire-based.
- If you lack good magic, bring lots of Grenades.
- A new monster makes an appearance in this cave: the Cherufe. This monster looks like a mini-volcano. Naturally, it will hit you with all kinds of nasty fire magic. Although you can't block Scorch, you can at least render Fire and Flame useless with a Flame shield.
- The other major threat is the Magician, although it only appears by itself (in groups of up to 4). Also in this cave is FireMoth and SunPlant, which have a tendency to use Fire magic. A Flame shield is recommended in all these fights. Other monsters that could be a threat for their high attack power and HP include the Ogre, Warrior, Mantcore, and Centros. The real threat will be when they appear in large groups.
- **NOTE:** The Storm staff replaces the old Mage Staff in the original game, and is far more powerful. Although it will be useless against the upcoming boss - it will work well in the next few worlds.

Monster Tip (level 6):

- There are regular level 6 monsters to encounter in the volcano ruins. If you haven't already transformed your monster by now.
- You will likely want a monster that can deal damage in the upcoming boss fight. If you need a healer, consider getting the Level 5 Sprite (or level 7 Fairy by fighting Demon, if you get very lucky).
- There are a few monsters that do well with the upcoming boss. Centros has 3-horns, which can deal a lot of damage – especially if you use Power MAGI in-battle to further increase strength. Centros also has very high HP. Another good choice is Champgno, since it has the Biochem ability. Champgno also has O-Death, which will block charm – a move used regularly by the upcoming boss. The Komodo also comes with biochem, but lacks O-Death. SunPlant is not a bad choice either since it has O-Death and Scorch (not as powerful, but will deal some damage).

Mutant Tip (level 6):

- Abilities at this level include O-Weapon, Charm, and Lightning. Lightning is very useful. It is slightly more powerful than Blizzard and Flame, and fewer monsters are immune to it.
- O-Weapon will cut physical damage received in half, which can be handy if your Mutant has terrible defense.
- Charm is not bad, but can probably be passed up on (although I'm sure someone out there can find a way to break the game with it)...
- NOTE: you can also learn some level 7 magic by fighting Demon. Check the Edo section for more info on the level 7 magic!

Venus:

- This battle could take a while depending on your party setup. Just like Ashura, Venus is immune to elemental magic - so don't bother with Fire/Ice/Thunder. Venus can use Charm, PSI Whip, Flame, and Fatal.
- For starters, you should have a lead character with high defense that can use a Flame Shield (you might consider purchasing one if you don't already have it). This will block Venus's Flame magic and PSI Whip. All you have to worry about now is Charm and Fatal. Thankfully, Venus seldom uses the Fatal magic. Charm is the biggest threat here and is used frequently.
- The most useful character in this battle is likely to be a human. If you give your human character an agility based weapon, Speed MAGI, and use the TrueEye MAGI, you should be able to deal 500+ damage to Venus each turn. This tactic could technically also work for a Mutant or Robot.
- You can also use a Strength based weapon with Power MAGI if your human has high enough agility to land a hit on Venus (and high enough strength to deal damage). This would be more powerful, but the trick is actually hitting Venus.
- For monsters, Biochem or Scorch work against Venus (see the section above for monster tips). If you have a monster with a powerful attack like Centros with 3-horns, consider using power MAGI to boost strength even further.
- For Mutants and/or Human mages, consider having them heal, or if confident enough, use a PSI Staff or the Scorch ability.
- If all else fails and your characters are under-trained, consider purchasing a few Magnums and have your lead character use a Flame shield every turn while everyone else fires upon Venus.
- **Drop:** Venus has an 80% chance of dropping one of the following: PSI Whip, Elixir, Remedy, Magic Potion. The PSI Whip and Remedy may be purchased later, but not for a few worlds.
- **NOTE:** Those familiar with the original FFL2 may notice Venus no longer gives the Aegis MAGI. This was an intentional change for balancing purposes (basically, the Aegis shield was too powerful and made most of the upcoming equipment redundant). Don't worry though; the Aegis is not gone for good!

World 8, Race Circuit:

Outside Area:

Monsters: Magician, Commando, Tororo, Antlion, Sahagin, Octopus, Warrior

Town:

- If you didn't already spend the GP dropped by Venus, purchase a Battle armor for your Human(s). The Battle armor is very different from the original game. It grants Strength +5 and Agility +5. This is a fine middleground of the +10 agility boost of the Quick armor and +10 strength boost for the Giant's armor while also offering superior defense. It's probably not worth purchasing Battle armor for your Robot(s) or Mutant(s) at this time, since a better armor for them is available in the next world.
- Make sure you get at least one Bazooka for the upcoming Race.
- You can purchase an Ice shield if you have extra GP to blow, only because a few monsters coming up are prone to using Ice (although you can likely do just fine without it).
- An Ice Sword can actually be useful since two of the upcoming mini-bosses are weak to Ice, but again this is not mandatory if you are tight on GP.

Dragon Race:

Monsters: Sentry, Magician, Commando, Tororo, Antlion, Octopus, Warrior, Sahagin

- If you have a Monster or Mutant in your party and desire to eat level 8 meat, pick the fastest Dragon in the race (the guy in the far left building on the north side of town who charges 1,000 gold). If you don't care about upgrading and/or don't have a Mutant/Monster in your party, pick the slowest Dragon and you will avoid most of the mini-boss encounters.
- The main threat here, similar to the Volcano Ruins, will be Magicians. Take them out first with a Bazooka, your most powerful magic, etc.. Commandos can also be a threat with their arsenal that includes a Bazooka, Grenades, and Flame Thrower - so they should likewise be promptly killed. The Sentry can also be dangerous, but is not as bad as the Magician and Commando and can be targeted last.

Mini-Bosses:

- The following is a list of each mini-boss you will encounter in the race, although not all these will be encountered depending on which Dragon you choose to Race on. If you pick the slowest Dragon, you will encounter none of these mini-bosses except the final one.

Adamant:

- You will fight between 1-4 Adamant Turtles. These are usually not a huge threat, but they do have incredibly high defense. Physical weapons might not do much, but Adamant is weak to ice. If you have an Ice sword or Ice magic, use it. Otherwise, use a Bazooka, FlameTw, Grenades, etc.

Styracos:

- There will be between 1-4 Styracos dinos. This is potentially the toughest mini-boss encounter if you are up against 4 of them. The dinos can cause mass damage with their attacks every single turn, so having your lead party member use a shield the whole battle is suggested. Have your other characters use guns, magic, etc. to bring down the dinos as fast as possible. They are weak against Ice, so be sure to use Ice magic or an Ice sword.

Ninja:

- You will face between 1-4 Ninjas. The Ninjas are much more deadly on higher difficulty levels. If playing on Insane or Lunatic skill, they will regularly attack AND block with the Sai or Jitte. The Ninja also has high agility, so consider relying on magic and guns instead of physical attacks. The good news is they don't have very high defense and are also weak to all status ailments. If you have fatal magic, use it.

Byakko + Fairy + Wyvern:

- That's right, Byakko is back! This time, he has backup: 1 Fairy, and 2 Wyverns. At the start of this battle, use an Ice Shield if you have it to block Byakko's Ice magic.
- Focus on defeating the Wyverns first with a Bazooka or group attack magic. The Wyverns are immune to Thunder. Have your Human(s) target the Fairy with their most powerful sword.

- Once the Fairy and Wyverns are down, Byakko will be exactly the same as last time. Use SpeedUp if you keep missing, and just keep attacking with your most powerful swords/guns.
- Just like before, elemental magic along with all the ailments will not work against Byakko.
- **Tip:** The Chainsaw will once again kill Byakko in one hit if you have a character with strength above about 55 + Power MAGI (or about 65 without MAGI).

World 9, Edo:

Outside Area:

Monsters: Demon, Yakuza, Hermit, Phantom, Wyvern, Gae Bolg, Gazer, Mosquito, Ninja (rare, 1/32 chance)

Monster Tip (level 7):

- A good monster choice at this point would be the Fairy, since it comes with Lightning (stronger than Flame/Blizzard), Thunder, Ice, and Heal. Lightning will attack all groups of monsters, and Heal will Cure all party members. Fairy is very useful for support and attack, but consider placing it in the back of the party since it has low defense.
- EvilPine also comes with Heal, and offers better defense and more HP than the Fairy. The downside to EvilPine is the lack of a good group attack and lower agility.
- If you don't need a Healer, instead consider Wyvern, which has Lightning, Scorch, and high HP.
- An all-around excellent choice is Stoneman, since it has "Tremor", a target-all move that is one step above Lightning. Stoneman also makes a good lead character thanks to its high defense along with o-change.
- Other good choices include Gazer with Beam, Mosquito with Biochem, and Demon with Scorch and Fire.
- If you lack a lead character with high defense, Gae Bolg is another excellent choice since it is immune to everything and has the "defense" move. Gae Bolg is even immune to the elements, which really helps against the upcoming boss that uses Thunder.

Mutant Tip (level 7):

- This is where Mutants have the potential to get interesting. They can learn Heal, Tide, and O-Element.
- Heal is like a healing staff, and will recover some HP to the entire party.
- Tide is a new, non-elemental attack. It is more powerful than Scorch, and is the best ability Mutants have against Bosses and/or groups of monsters that never fails.
- O-Element blocks Fire, Ice, and Thunder attacks - which can also be very useful at this point of the game.
- If you have them, consider replacing Cure with Heal, or replace Scorch with Tide.

Edo Castle (Outside perimeter only):

Treasures: Sai

Monsters: Knight, Gazer, Tarantla, Ninja, Wyvern, EvilPine, Gae Bolg, Yakuza, Anaconda, Fairy, Mosquito (rare, 1/32 chance), Stoneman (rare, 1/32 chance)

- Although you can't do anything inside Edo Castle yet, you can get a treasure by going into the guard tower. The treasure is a Sai, which you can equip or at least sell for GP. It is an agility-based weapon that offers 50% evasion when used. You can also purchase these in Edo town.
- The area outside the gate is also not a bad place to gain GP, since Knights and Gazers often appear in large single groups that can be killed quick and give lots of GP. Knights will also frequently drop expensive swords, and Ninjas will frequently drop expensive daggers for selling. There is also a slightly higher chance of obtaining a speed potion from Ninjas.
- Use caution around Knights, since they can deal a lot of damage with those swords. Have your lead character use shields if you must. For the Ninjas, use magic and/or guns. Fatal magic will work.

Edo Village/Samurai:

- The Samurai blocking the path can be difficult – especially on higher skills. You will encounter between 1-4 of them.

- Have your lead character use shields to block their very powerful sword attacks, and use your most powerful attacks: Bazooka, Swords, Magic, etc...
- If you keep missing or aren't dealing enough damage, consider having a human in the back row use TrueEye to boost agility, then attack with agility based weapons or swords.
- The Samurai have about a 1/15 chance of dropping a Nodachi sword – although this can also be purchased in this very same town north of the bridge.

Edo Village/Shopping:

- At this point of the game, there are many good items to purchase, yet so little GP to do so. The very first item to consider is the Dragon Armor in the Item shop in the North end of town. The Dragon Armor is superior for your Robot(s) and Mutant(s). It will block Fire/Ice/Thunder, and also has slightly more defense than the Battle armor. The only downside to it is the lack of stat boosts. For this reason, the Battle armor might still be a better choice for your Human(s) if you purchased it in the last world - at least for now.
- The Dragon Shield will block Fire/Ice/Thunder for the entire party the entire battle that it is used in. This is especially handy to protect those characters that don't yet have the Dragon armor.
- There are tons of weapons to purchase if you include the stuff at Echigoya's shop, but many of them you don't actually need yet. For example, you will get one free Beam Gun and Tank in the next area. You might only purchase a Tank if you want more than one for your Robot, or if you have two or more Robots in your party.
- Although Flare is powerful, it's too expensive at this time to spend that much money for only 10 uses. Likewise, Missile is also kind of a waste for only 10 uses (5 if given to a Robot).
- The Dragon Sword, although powerful, is overkill at this point of the game - so you really don't need that either. Instead, consider going to the weapon shop on the North end of town to pick up a Nodachi for your Human(s). It is less expensive and should kill most regular monsters in a single hit (at least for now).
- If your Mutant(s) have not learned any good magic, you can consider purchasing a Cyclone book from Echigoya, a new spell in the game. Cyclone is non-elemental and will harm any group of monsters regardless of their immunities.
- Alternatively, if you used up the Storm Staff from the Volcano ruins and need something that will harm all monster groups, consider picking up another one on the North end of town. The Storm Staff is also half the cost of Cyclone, although it will not harm monsters immune to thunder.
- A great option for your Robot/Cyborg at this point is the Sai in the weapon shop in the North end of town. The Sai offers a nice agility boost and a 50% evade bonus when using it in-battle. Judo will boost your Robots agility even higher than the Sai, but it won't deal any damage for the Robot or offer any other benefit. Your Human(s) can also benefit from the Sai if you have them in the front of the party, or if you need to train agility.
- Last and probably least, don't waste any money purchasing a Vulcan Gun, unless you have a multi-robot party and lack the GP to get Tanks from Echigoya.

Echigoya's Ship:

Treasures: Beam Gun, Tank, Hecate Boots

Monsters: Phantom, Wyvern, Gae Bolg, Boulder, Tarantla, EvilPine, Gazer, Mosquito, Anaconda, Fairy, Ninja, Demon, Hermit, Knight, Yakuza (rare, 1/32 chance final room only)

- This short dungeon should not be difficult. Just be wary of Knights, Ninjas, and Gazers, since their attacks can deal a lot of damage. When up against Knights, consider having your lead party member use a shield each turn. Gazers will use Beam sometimes, which will ignore defense completely. Just use all your most powerful attacks against Gazers to take them down fast. If all else fails, run from the encounters!
- **NOTE:** The Beam gun, although seemingly inferior to the Tank initially, DOES have its uses. In the average battle, the Tank will be superior: It hits a whole group instead of just a single target, it defends the person using it, and it deals more damage against monsters with normal defense. However, the hidden attribute of the Beam gun is how it ignores defense, and will actually cause more damage against bosses or heavily armored monsters. You will find the Beam gun consistently dealing more damage against bosses compared to the Tank. If you are struggling to win against any particular boss, then you can't go wrong with a few extra Beam guns!

Behind Echigoya's Shop:

Monsters: Ninja, Knight, Gazer, Mosquito, Tarantla, Wyvern, Anaconda, Fairy

- Before you run straight to beat up Echigoya, it should be noted that the first room in the hallway has a lone ninja standing there. Talking to him will cause a random encounter. This is actually a great way to gain GP! Talk to this guy repeatedly to face single groups of Knights, Ninjas, and Gazers - all of which are easy to defeat with your Tank and give lots of GP along with expensive drops that you can sell. If you've been behind on GP for a while, now is your chance to get ahead. Once you defeat Echigoya, the man will disappear.
- The fight with Echigoya and the Samurai can be incredibly difficult on higher skills. You will face 9 of them, which could involve some good luck to win.
- On average and veteran difficulty, this battle is as simple as targeting the Samurai with a Tank, followed by Echigoya with your powerful single-target moves. The Tank will often kill the samurai with in one shot. However, on higher skills it could take 2-3 shots.
- Have your lead character use a shield to block the powerful attacks from the Samurai if not using a tank. If you are struggling to win, purchase tanks at Echigoya's shop and give them to multiple party members.
- **DROP:** Echigoya can drop the Abacus (about 1/4 chance), which has been tweaked to be much better than it was in the original game. It now causes fixed damage to a single group of monsters, and will boost agility a decent amount if equipped on a Robot. Although you cannot ever purchase an Abacus, you CAN in fact get one in the very next area in a treasure chest - so don't worry if you don't get a drop from Echigoya.

Preparing for Edo Castle:

- Before tackling Edo Castle, you might want to purchase a Heal Staff in town, and make sure your lead character has a Dragon shield. The upcoming boss uses Thunder, which the Dragon Shield will block (it also blocks Fire and Ice).
- If you are lacking in the Cure/Heal department, you might also want to carry a Cure Book to the castle. The Fairy and EvilPine monsters both have Heal, which will also help a lot.

Edo Castle:

Treasures: Abacus, Body Potion, Ninja Glove, Missile, Dragon Sword, Dragon Shield, Samurai Bow

Monsters: Samurai, Knight, Gazer, Mosquito, Tarantla, Ninja, Wyvern, EvilPine, Gae Bolg, Yakuza, Anaconda, Boulder, Fairy, Mosquito, Stoneman, Phantom, Demon, Hermit

- Before entering, you must fight more Samurai. This time there aren't as many, and by now you should know what to do.
- Once inside the castle, you can also encounter Samurai as regular encounters. You fought plenty of them by now, but they can still pose a threat.
- There are some decent treasures that should be noted here:
 - Abacus:** The Abacus is a pretty decent group attack weapon, at least until you get the Samurai Bow coming up. For now, consider giving it to your Robot and later replace it with one of the two Samurai Bows. You can also give it to a human and/or mutant if you don't want to waste it.
 - Ninja Glove:** The Ninja Glove grants the wearer O-Weapon, which cuts the damage received in half and is incredibly useful against the next few bosses. Give it to your lead character.
 - Samurai Bow:** This is the final treasure box in the room with Shogun. Before handing it off to a Human for a mere 30 uses, instead consider giving it to a Robot. It will deal significant damage, and also increases a Robot's agility (nearly as much as Judo). The purpose of course is so that a Robot can recharge the bow each time it runs out!

Shogun:

- This fight is pretty much a joke, and should be over in a few moves. Use just about any tactic you want, and Shogun will be done before you know it.

Optional Boss, Dolphin:

- If you talk to one of the two statues near the next boss (Magnate), you will fight an optional boss called Dolphin. Just know that this boss is not easy.
- You don't gain any GP for winning this battle, but you can gain stats easily, and you also have a 20% chance of Dolphin dropping a Magic Potion, Speed Potion, Power Potion, or Body Potion (new to this hack).

- Dolphin can now also drop level 8 meat . This meat will be available in the next world, but it also might help to transform your monster right now before facing Magnate.
- If you choose to face Dolphin, just use your most powerful attacks like the Samurai Bow, Tank, Beam Gun, etc... The TrueEye MAGI could also help if you are having trouble hitting Dolphin with swords (Dolphin has very high agility). The only real threat is when Dolphin uses Whirl twice in a row. If this happens, it might be game over unless you use a heal staff.

Magnate:

- There are a few changes to Magnate in this hack. The most noteworthy change is his new weapon: the Masamune. If he uses Masamune, you will likely lose a character unless their HP is very high. You can cut the damage dealt by Masamune in half by equipping a Ninja Glove. Go ahead and give the lead character a Ninja Glove to help survive Masamune.
- Magnate will also use Thunder (most common), Vulcan (also common), Tornado (less common), and Stone (even less common). Tornado is a very big concern, and the reason you (hopefully) brought a Heal Staff into this battle.
- When you start this battle, use a Dragon Shield right away to render Magnate's Thunder magic useless. Then, have your Robot(s) use a Beam Gun. Although the mighty tank is tempting to use, it will only deal 200-300 damage, while the Beam Gun deals 400-600.
- Have your Human(s) use the Dragon sword you picked up in the Castle, or a Nodachi if you bought one. If they keep missing, use the TrueEye MAGI. Alternatively, you can also speed up your humans until a Sai deals a lot of damage.
- To ensure victory, have a Mutant use a Heal Staff every single turn in case Magnate uses Tornado. Otherwise, if you feel confident enough, have your Mutant(s) use their most powerful attack magic on Magnate. The good news is that Magnate has no immunity to elemental magic, although Fatal and Stone will not work on him.
- For your Monster(s), have them use moves like Beam, BioChem, Scorch, Tremor, Lightning, Thunder/Ice/Fire, etc...
- For Taro, have him use his Muramas every turn.
- With a bit of luck, you should win this battle in about 5-7 turns (possibly more if you are undertrained), unless playing on the highest difficulty.
- Magnate has around 5,000 HP on average difficulty, 7,000 on Veteran, and 9,000 on insane.
- **Drop:** There is an 80% chance you will get one of the following: Magic Potion, Speed Potion, Power Potion, Body Potion

MASMUNE MAGI:

- When you win this battle, you will get the Masmune MAGI. Any fan of the original game will know that you didn't get this MAGI until later in the game when it was already almost useless. Now you get to use it a decent amount!
- Just like other MAGI, make sure you equip it on a character in the MAGI menu, then inside a battle scroll to the VERY bottom of the item list to see the Masmune.
- The Masamune (Masmune) will deal about 600-800 damage, fixed. The best part of the Masamune is that it never misses, and it pierces defense (including bypassing O-Weapon).
- Perhaps the best part of the Masamune is being able to equip it on a Monster. If you have an awesome defensive monster that can't attack very well, consider giving that character the Masamune. Handing it over to a Mutant is also not a bad choice if you have them focusing on healing magic. Although it seems logical to give the Masamune to a Human, this is not really the best choice unless you trained your Human as a mage or something similar.

World 10, Nasty Woods:

Outside Area:

Monsters: Adamant, Swallow, CatWoman, Nitemare, Dragonet, EvilMask, Styraeos (rare, 1/32 chance)

Monster Tip (level 8):

- Most level 8 monsters come with some form of single group attack as well as a target-all attack, so most of them are just about equal; however, the only level 8 monsters that have Cure are Lamia and CatWoman (if you are lacking in this department).
- For the upcoming boss fight, the best choice might be EvilMask, since it has Thunder and Ice immunity on top of O-Change, which blocks just about everything else. EvilMask also has

Beam, which causes decent damage. The only drawback to EvilMask is its weakness to Fire, but thankfully the boss does not use Fire.

- Another good choice is CatWoman, which comes with Cure and Accel. There is a description of Accel in the WereWolf section above (level 5 monster), but basically you can keep using Accel to boost agility, then attack with "Claw" for mass damage since it's an agility based attack.
- If you need a good defensive monster for a lead position, Answerer is a good choice since it is immune to just about everything and has the "defense" move.
- Adamant has insane defense and "Shell", but is weak to Ice, which is a bad idea for the upcoming boss since it uses Ice.
- Styraeos is also weak against Ice, although it has a lot of HP.
- **NOTE:** The second half of the Nasty Woods has some level 9 monsters. Check the "Final World" section to read recommendations for level 9 monsters!

Mutant Tip (level 8):

- At this point, Mutants can learn O-Change, which blocks fatal magic, stone, paralysis, poison, and cuts physical damage in half (same as O-Weapon). You can also learn Touch (drains HP), and the new ability: Tremor. Basically, Tremor is more powerful than Lightning but weaker than Quake (although it has 10 uses instead of 5). Tremor will work against all monsters except those that are flying or those that have O-Quake.
- Tremor is a very useful ability at this point of the game, and is worth retaining (you can consider replacing Lightning if you learned it).
- O-Change is hard to resist keeping as an ability as well, and should replace both O-Element and O-Weapon.

Preparing for the Nasty Woods:

- NOTE: As of version 2.0, the "Nasty Dungeon" has been replaced with all new areas. It is now the "Nasty Woods", but don't let the name deceive you; the themes do actually change!
- It's always a bit tough deciding what to do at this point. Some people might just grab the MAGI in the very first treasure box and leave this world behind completely, never to look back. Other people might want to race through the whole place immediately, running from all the monsters and grabbing all the treasures. A good compromise is to complete about half of this world now (up until about the fourth area), and return later for the second half when monsters get tougher. If you wish to grab the MAGI only and pass up on all the awesome loot, skip this section and proceed to World 11.
- If you choose to proceed through the dungeon, some good preparation is in order. If you don't have Dragon Armor or at least a Dragon Shield, now is the time to get it. Most monsters in this dungeon will use target-all Fire/Ice/Thunder spells on you, so having elemental immunity is almost mandatory.
- Also recommended is a Heal Staff or two and/or some Cure Books. You will likely need to be healing often. You will also want some Softs and Eye Drops, since quite a few monsters use Stone and Blind. Another alternative is to have a Mutant or Monster with Remedy.
- If you can also manage to get your Mutant or Monster the "Warning" ability, you will avoid all the surprise attacks that will otherwise occur. Level 8 Monsters that have the Warning ability include the Shark and Swallow. Level 9 monsters with Warning are the Watcher, Cocatris, and Chimera (level 9 monsters don't make an appearance until beyond the halfway part of the dungeon).

Nasty Woods, First Area:

Treasures: Power Potion, Body Potion, Dragon Armor, Speed Potion

Monsters: Adamant, Swallow, CatWoman, Nitemare, Dragonet, EvilMask, Styraeos (rare, 1/32 chance)

- The first area, along with the next few areas, are more tedious with the constant encounters than they are dangerous. As long as you have Dragon gear, most of these monsters shouldn't pose a threat. Just watch out for Dragonet's Scorch, Adamant's Acid, and EvilMask's Beam attacks.
- There is an extra Dragon armor here in case you couldn't afford it for all your characters. At this point it is probably a good idea to replace any remaining Battle Armors you have equipped with the Dragon armor.

Second Area:

Treasures: Beam Gun, Magic Potion, CatClaw

Monsters: Dragonet, Catwoman, Devil, Answerer, LavaWorm, Swallow, Nitemare, Styracos, Adamant, Shark, SnowCat, Lamia

- This area adds the more dangerous Styracos, which you likely encountered in the Dragon Race. It can be deadly in larger groups with its high attack power. Use a shield if necessary. Noteworthy Treasures:
- **CatClaw:** This is the most powerful agility-based weapon (excluding martial arts) – although it does not block attacks like the Sai and Jitte. The CatClaw is a great option for a Robot if you wish to stack agility and deal a lot of damage on a single target (like a boss). It's also not a bad choice for a human and/or mutant that needs agility training. The CatClaw also does very well when combined with Speed MAGI and/or TruEye (when used in-battle to boost agility).

Third Area:

Treasures: Elixir, Speed Potion, Dragon Sword

Monsters: Dragonet, Catwoman, Devil, Answerer, LavaWorm, Swallow, Nitemare, Styracos, Adamant, Shark, SnowCat, Lamia

- The theme of this area changes to the volcano theme, but the monsters are mostly the same.

Fourth Area:

Treasures: Tent, Dragon Helmet, Tank, Missile

Monsters: Answerer, CatWoman, Nitemare, Styracos, Adamant, SnowCat, LavaWorm, Swallow, Dragonet, Devil

- **Dragon Helmet:** It's worth mentioning that the Dragon Helmet blocks Fatal magic along with Poison. This is a very handy piece of equipment.

Oceanus, mini-boss:

- Before proceeding to the next area, you must defeat a mini-boss. If you are on insane or lunatic difficulty, there could be between 1-4 of them. On any other skill, you will face just one.
- Oceanus has a lot of HP. It is extremely deadly with Whirl, Tide, and a very powerful new weapon called the "Trident" – a target-all attack that can wipe out your entire party in one hit (this will not be used in Average difficulty). Oceanus is immune to all elemental magic and fatal magic, but lacks O-Weapon. You will want to take out Oceanus as fast as possible before it destroys you. The best strategy would be to have every character focus on attacks rather than bothering to defend.
- On higher difficulties, this battle will likely require some luck. If you are getting destroyed, just keep talking to Oceanus until you only encounter 1 of them. If you still can't win, consider returning later with better gear.
- **Rare drops:** Oceanus has a chance to drop the very rare Trident (about a 1/16 chance), which is very advanced at this point of the game. You can fight Oceanus again later as a common encounter, so don't worry if you don't get your Trident yet.

Fifth Area (Flooded Palace):

Treasures: Cyclone Book, Defend Sword, Samurai Bow, Judo, Muramas

Monsters: Dragon, Naga, Chimera, Cocatris, Watcher, Dolphin (rare, 1/25 chance)

- The theme will now change to a flooded palace in this area, and the difficulty takes a step up.
- This floor has Level 9 Monsters. In addition, you may rarely encounter Dolphin (was also an optional boss fight in Edo Castle). It's possible you may not be ready for these monsters. If you are undertrained, you may consider using the Pegasus MAGI to exit the dungeon and come back later with better equipment and more rounded characters. Otherwise, you may proceed if you feel confident enough – or you can run from everything!
- The most dangerous monster is easily Dolphin for its high HP and high chance of using whirl.
- Other dangers include Watcher for its Beam attack, Cocatris for its high chance of turning a character to Stone, Naga for charm, and the Dragon for its constant use of Scorch.

Noteworthy Treasures:

- Samurai Bow #2: There is a second Samurai Bow on this level, which is best if given to a Robot/Cyborg. At this point, you will have two Samurai Bows on your Robot (if you only have one Robot). This will grant a serious agility boost to the Robot and allow for all kinds of damage.
- Muramas: The Muramas sword is among the most powerful swords in the game; in fact, it is much more powerful than in the original FFL2. Even when you get the fabled endgame sword later, the Muramas is still often more powerful on a single target (depending on how high the defense is of the target). This is discussed more in the "Final Dungeon" section in World 12. The Muramas is a good sword to give to your Human(s), although the Robot is not a bad idea either if you want to switch roles (see the Robot "Gungnir god" tip below this").
- Defend Sword: The Defend sword is not quite as powerful as the Dragon Sword, but of course it has the added benefit of being able to defend as well as attack. It also has a chance to boost the Defense stat at the end of the battle (mostly for Mutants, since Humans are near impossible to increase this stat for).

Sixth Area (Flooded Palace):

Treasures: Arthur Armor, Parasuit, PSI Gun, Tent, Sun Sword, Glass Sword

Monsters: Dragon, Chimera, Watcher, HugeToad, Cocatris, Naga, Tengu, Malboro, Dolphin (1/16 chance)

- Tengu makes an appearance on this floor, and can be deadly if it uses Tornado. If used twice in a row, it could wipe your entire party. Target them first!
- HugeToad can also be a slight danger with BioChem, but not as much of a threat as the previous monsters already mentioned.

Noteworthy Treasures:

- Arthur Armor: The Arthur Armor is a massive upgrade when compared to the original FFL2. It now blocks Fire/Ice/Thunder along with Stone and Quake. When combined with the Dragon Helmet and Ninja Glove, you will basically have O-All (which is immunity to everything + O-Weapon). The Arthur Armor also grants a whopping 50 defense points and +5 agility, strength, and mana. The Dragon Armor only grants 30 in comparison (with no stat boosts). Consider giving this armor to a Human using swords, since they benefit the most from the stat boosts. It also works on a Mutant or Robot, but there is a better choice, which is discussed next.
- Parasuit: This ultimate armor takes the place of ALL your defensive gear. You CANNOT equip it unless you first unequip gloves, boots, armor, and helmet (this does not apply to a Robot, since they can stack any gear without restrictions). The Parasuit has better defense than most equipment combined at +73. It grants +15 agility points and +15 Strength points. It also offers immunity to everything except Poison and Thunder. It even comes with O-Weapon. The parasuit offers no mana boost, but it still might be the best choice for a Mutant. Since the Parasuit frees up 3 armor slots, the Mutant could equip other nice stuff you have rotting in your inventory - like a Flare book, Cyclone Book, PSI gun, Heal staff, Rune Axe, etc... The Human is not a bad choice for the Parasuit since it would give them a nice strength and agility boost, but Humans don't typically need those free slots for inventory. Robots should probably be your last choice for this armor, at least for now (unless you have a party with multiple Robots). Robots will benefit from the immunities, but not much else.
- PSI Gun: The PSI Gun is quite simply the most powerful magic weapon your Mutant(s) can have for a single group of monsters. Flare is better at targeting all groups of monsters, but the PSI Gun deals slightly more damage on a single group. Consider saving the PSI gun for tougher battles later. If you can, hold it in your inventory!
- Sun Sword: This sword is completely different compared to the original game. Instead of just being another powerful single target weapon (don't you have enough of those?), it will target a single group of monsters. This sword will boost a Robot/Cyborgs strength dramatically (something you may have been neglecting until this point). You can give it to a Human if you really want, but your Human will be getting something much better very soon. Instead, consider giving the Sun Sword to the Robot along with a weapon found in the next floor (more details coming right up).
- Glass Sword: The Glass Sword has been beefed up big time. It can possibly deal well over 1,000 damage to a single target. The Glass Sword only has one use, so unfortunately it does no good giving it to a Robot/Cyborg. It makes the most sense to give it to a Human. I'd suggest holding on to it until you encounter a tougher boss.

Seventh Area (Flooded Palace, final area):

Treasures: Gungnir, Karate, Hyper, Flare Book, NukeBomb

Monsters: Tengu, Malboro, Dragon, HugeToad, Naga, Chimera, Watcher, Cocatris, Dolphin (1/8 chance)

Noteworthy Treasures:

- **Gungnir Spear:** This is one of the most powerful weapons of the game. It can deal mass damage to a single group of monsters, even with low STR, and will never miss. The downside is that it has limited uses, and there are limited Gungnir spears in the game (three total if you include an incredibly rare drop coming up). Thankfully, if you have a Robot/Cyborg, you may equip this on them for unlimited recharges with 15 uses. In fact, now is a good time to discuss switching the role of your Robot/Cyborg in the next section, "Robot/Cyborg Gungnir God".
- **Flare Book:** Flare is simply the best magic in the game for targeting all monsters on the screen at once. It's also the most powerful at this point for attacking a single target. However, there ARE other magic abilities coming up that can deal more damage than Flare on a single target! For now, you should save Flare for the upcoming bosses.
- **Karate:** This is the best martial art you can equip on any character. Although you may be tempted to give it to a Human, you might instead consider a Robot/Cyborg. It grants the largest agility boost of any weapon/item. It will boost a Robot/Cyborg agility by 32 points. Judo is 26 points in comparison. Your Robot will likely never be using the Karate since it will deal 0 damage, but just having one in their inventory will make them incredibly fast.
- **Hyper:** The Hyper Gun is completely unchanged from the original game. It quite literally sends every monster on the screen into the unknown (kills them all instantly). The Hyper works on all regular encounters, but will not work on bosses. It can be given to a Robot/Cyborg, which reduces the uses down to just "1", but can then be recharged indefinitely. This will eat up a valuable slot however, so the choice is yours.
- **NukeBomb:** The NukeBomb is really nothing that special. Don't bother holding on to it for very long. Sometimes it's best just to use it in the Final Dungeon coming up when you are in a jam.

Robot/Cyborg "Gungnir God" Tip:

- Up until this point of the game, your Robot/Cyborg has probably been the lead character with all that armor and high defense. Although this strategy can continue to work, Robots will begin to feel lackluster with Tanks and Beam Guns. Thanks to all that great treasure in the Nasty Woods, you can now consider switching the role of the Robot/Cyborg to something much more powerful. For starters, give your Robot/Cyborg a Gungnir Spear, a Sun Sword, x2 Samurai Bows, and another sword like a Dragon Sword or Muramas (for now). You can ditch those old weapons like the Tank, Beam Gun, Abacus, etc...
- You should have two remaining slots now for the Robot. What exactly you do is up to you, but some good options are as follows: Two Armors (to retain moderate Defense on the Robot), or one Karate and one Armor (for high agility at the expense of lower defense), or One Karate with another Martial arts like Judo (for insane agility with no defense whatsoever). For the last two options, consider placing your Robot/Cyborg in the very last position so it isn't attacked much.
- Congratulations, you have now created a Gungnir Robot wielding "god" that can deal 1,000+ damage. Thanks to the high agility, you should be able to wipe out a whole group of monsters before they even attack you. There are more weapons and items coming up that will make your Robo "Gungnir god" even more powerful, but that is for later...

Human "King Arthur" Tip:

- If you followed the previous tip and created a Robot "Gungnir god" (or even if you didn't), you may be wondering who will fill the void of being the lead character that takes all the hits. For this, consider turning your Human into a "King Arthur". Basically, just give your Human the Arthur Armor, Ninja Glove, Dragon Helmet, and Hermes boots. With this setup, they will have 82 defense along with O-All (immunity to everything). Now just give your Human the best weapons you have for the time being (Muramas, Dragon Sword, Defend Sword, Judo for training agility, etc...) You may also give your Human guns as a temporary solution to deal with groups of monsters. Coming up in World 12, you will get another weapon that will truly complete your "King Arthur", but that is for later...

“Indestructible” Mutant Tip:

- Don't forget you can boost the natural defense of Mutants by having them use shields in-battle! A Defend Sword would also work. Boost their natural DEF to just a mere 26, and the Parasuit will now take them to 99! Or, if you want a walking indestructible tank, boost their natural defense to a higher number, have them learn the O-All ability (see the level 9 magic section coming up), and ditch defensive gear altogether. With some effort, you could easily make your Mutant the best defensive lead character, AND have plenty of free slots for attack/support abilities and items!

World 11, Valhalla:

Outside Area:

Monsters: EvilMask, Answerer, Lamia, Killer, LavaWorm, Styrcos, Adamant, Dragonet, CatWoman, Nitemare, Ghast

Valhalla Palace:

Treasures: Defend Sword, Wizard Staff, Dragon Armor, Rune Axe, Flare Book

Monsters: Killer, Lamia, EvilMask, Answerer, LavaWorm, Shark, Swallow, Styrcos, Adamant, Dragonet, CatWoman, Nitemare, Ghast, SnowCat

NOTE: On Lunatic skill ONLY, there will be some level 9 monsters in the final two rooms: Dragon, Chimera, Tengu, Malboro, Cocatris, Watcher, Naga

- Most of the monsters found here were already discussed in the Nasty Woods section above. The exception is the Killer, which only makes an appearance at Valhalla Palace. Killer can be a threat if Chainsaw is successful, since he regularly uses it. For this reason, you should target the Killers first.
- Most treasures found in Valhalla palace are already discussed in the Nasty Woods section, but there are a few that are new.

Noteworthy Treasures in Valhalla Palace:

- **Rune Axe:** The Rune Axe has undergone some tweaks from the original FFL2. It is now purely a Mana based weapon. It has the potential to deal mass damage if you give it to a Mutant or a Human with high Mana, but the trick is being able to hit with it (your Mutant might have low agility, which will cause it to miss). If you are missing with the Rune Axe, consider keeping it in your inventory until later. The Rune Axe has the interesting side effect of reflecting magic back upon the enemy caster, like Mirror. It also has a chance to boost your Mana stat at the end of the battle.

Odin:

- Odin can be tougher than the original FFL2, but the good news is you also have some great new options to bring him down, including the wonderful Masamune MAGI!
- First and foremost, you should have someone use a Dragon Shield the first turn. Either that, or equip everyone with Dragon Armor, Parasuits, or Arthur Armor (if you visited the Nasty Woods). Failing to do so will result in Odin killing you with Lightning and Ice.
- Once you are protected against his magic, your next worry will be Odin's incredibly powerful Gungnir spear. If your characters don't have high enough HP, he can kill them in one hit. You can cut the damage of the Gungnir in half by equipping the Ninja Glove from Edo Castle. Alternatively, you can have a mutant learn O-weapon/O-Change, or transform into a monster with O-weapon/O-Change like EvilMask. Place the character with O-weapon in the lead position. With a little luck, Odin will only target your lead character with Gungnir and deal no more than about 300-400 damage.
- At the start of the battle, you should focus on taking out Roc first. Roc has a decent chance of using Tornado, which can wipe out your entire party. Next, you should take out Sleipnir, if not just to make this battle easier against Odin only. To help clean out the field, consider using that Flare Book you just obtained. Also, have someone use a Samurai Bow against the Roc group.
- For the rest of the battle, have a Mutant use a Heal staff every turn. The most powerful weapons against Odin will be the Beam Gun, Masamune MAGI, Flare, and the Muramas Sword and/or Gungnir (if you got them in the Nasty Woods). The Dragon Sword is not too shabby if you don't have the Muramas.

- If you have a Monster, give them the Masamune MAGI. This will let them deal quite a bit of damage to Odin each turn.
- Using just two of the powerful weapons already mentioned each turn along with a Heal Staff should allow you to win in about 7-8 turns. Odin has about 3,500 HP in average difficulty, 5,000 in Veteran difficulty, and about 10,000 HP in insane difficulty.
- **RARE DROP:** Odin has about a 1/4 chance of dropping the Gungnir Spear - one of the most powerful weapons of the game. Any fan of the original game will know that it takes a ridiculous amount of effort to get Odin to drop the spear. Although it's far easier to obtain now - there is less reason to kill yourself obtaining it, and that is because you can get two Gungnir spears in addition to this: one in the Nasty Woods (you might already have this one), and another in the final temple. If you really want a 3rd spear, you can attempt to get the rare drop from Odin - but most people will find 2 of them to be adequate enough. The best character to equip the Gungnir on is a Robot/Cyborg. There is more info on the Gungnir spear and Robots above this in the Nasty Woods section (see the "Robot/Cyborg Gungnir God" tip).
- **MEAT TIP:** If either Sleipnir or Roc drop meat, you will be able to turn your monster into a level 10 monster (or possibly get your Mutant a level 10 spell). This will be very useful for the upcoming boss in the final world. See the "Central Shrine" section for tips on Level 10 monsters.

Aegis MAGI:

- Upon defeating Odin, one of the MAGI received is the Aegis Shield. In the original FFL2, this was dropped by Venus. There are some changes to this MAGI. It no longer grants O-Weapon, and it is limited to 5 uses (can be recharged). Everything else about it is the same: it still blocks Fatal Magic, Fire/Ice/Thunder, Poison, Quake, and Stone.
- If you are playing in average difficulty, the shield has unlimited uses without needing to be recharged.

Spoiler: There is another shield you can get later that grants O-Weapon in addition to everything else (O-All). This is discussed in the "Central Shrine" section.

World 12, Final World:

Outside Area:

Monsters: Nymph, Falcon, Cocatris, Watcher, MechCrab, Watcher, Tengu, Ridean, Dragon (rare, 1/32 chance)

Minion:

- After briefly speaking to Apollo, you will face Minion. Minion has a lot of HP and a decent chance of using Tornado. The good news is that Minion lacks O-Weapon and immunity to the elements. This means you should be dealing lots of damage every turn.
- If you lack protection to Elemental magic, start the battle off with the Aegis MAGI.
- Use weapons like the Masamune MAGI, Beam Gun, Samurai Bow, Tank, Dragon Sword, Muramas, Flare, Cyclone, etc..
- Every time Minion uses Tornado, have your Mutant use a Heal Staff. If you are worried about Minion attacking with Tornado twice in a row (especially if he is faster than you), then simply use Heal every turn.
- This battle will last a little while, but in reality isn't overly difficult.

Dad/Captain Tip:

- Something very important you should notice about Dad this time around: you can unequip his inventory! Since you have him for quite a while, this should prove useful. The only item of his you cannot unequip is his sword.
- Dad comes equipped with the Captain Sword. It has unlimited uses and will cause quite a bit of damage on a single target (great for bosses or monsters with lots of HP). It also has a 50% chance of blocking an attack.
- Dad could use more armor in his empty inventory slots, but it's not required and you can likely beat the upcoming areas without doing so. If you have extra GP, consider purchasing a Ninja Glove. If you have LOTS of GP to spare, also consider a Dragon Helmet and Hermes Boots.

- To help clear out groups of monsters in the Final Dungeon, consider giving Dad a group attack spell like Flare or Cyclone. You should especially do this if you plan to re-visit the Nasty Woods with Dad (if you haven't completed it yet).

Monster Tip (level 9):

- It should be noted that level 9 monsters are not very defensive in nature; most of them are better in the magic/agility departments. If you need a good lead party member with high defense, then some of the level 8 monsters mentioned in the previous section might be better choices. That said, Malboro is not a horrible lead choice since it comes with death and poison immunity.
- Nymph is always a good choice for a level 9 monster, since it comes with the incredibly powerful Whirl attack, Lightning, Thunder, Ice, and Heal. That being said, Nymph has fairly low HP and can possibly die in one hit against the upcoming boss.
- Perhaps the best level 9 monster against the upcoming boss is MechCrab. The reason is simple: MechCrab has higher HP, ComVirus, and Beam. The ComVirus move will inflict a lot of damage against the coming boss.
- Tengu is not a bad choice either since it comes with Tornado (works the same as Whirl) and Thunder - but it lacks Cure.
- If you don't need a monster with Cure, The Dragon is decent with Lightning, Scorch, Flame, and lots of HP.
- Watcher comes with Beam, which also works against the upcoming boss.
- BioChem is completely useless against the upcoming boss, which is sadly why HugeToad is not the best choice (which is otherwise a good monster).
- NOTE: If you ate meat from Sleipnir or Roc, you will be a more powerful level 10 monster by now. Skip to the Central Shrine section to read tips on level 10 monsters!

Mutant Tip (level 9):

- Now your Mutant(s) can learn O-All, Recover, and Calamity. O-All will make your Mutant immune to every ailment in the game while also granting O-Weapon (cuts physical damage in half) and O-Element (blocks Fire/Ice/Thunder). In general, it is definitely worth losing an magic/ability slot with your Mutant for O-All (replace O-Change, O-Weapon, or O-Element if you learned any of those).
- Recover will do exactly what the name suggests, which is recover a bit of HP every turn during a battle. It is not necessarily worth taking up one of your four slots, but it does have its uses.
- Calamity will attempt to cause instant death to all monster groups on the screen, similar to the Wizard Staff. It can be powerful, although it's up to you if it's worth losing a slot over.

Town/Preparing for Final Dungeon:

- NOTE: If you skipped parts and/or all of the Nasty Woods, now is a good time to go back and complete it. That is unless you intend to skip it entirely...
- Preparing for the Final Dungeon should not be too difficult, considering all the nice treasures you should have obtained in the last few areas. Just make sure you have a few Heal staffs!
- As mentioned above, if you want to make Dad more powerful, feel free to equip a glove, helmet, and boots on him if you have extra GP sitting around. Even just Ninja Gloves will beef him up nicely!

Final Dungeon:

Treasures: Karate, Sun Sword, Arthur Armor, PSI Gun, Parasuit, Tent, Excalibur, NukeBomb

Monsters: Dragon, Nymph, Sorcerer, Tengu, Falcon, MechCrab, Ridean, Cocatris, Watcher, Chimera, Naga, Malboro, HugeToad

NOTE: On Lunatic skill ONLY, there will be some level 10 monsters in the second half: Seiryu, T-Rex, Tank, SS, Wurm, Euryale, DarkRose, Giant, IronMan, and BoneKing.

- Many of these monsters make a return from the second half of Nasty Woods (refer to that section for a better description of each). The new monster here is Nymph. You should definitely focus on taking out the Nymph first, since they have a very high chance of using Whirl. Other monsters you should focus on eliminating are Tengu (can use Tornado often), Sorcerer, Cocatris, and Watcher. Each of these monsters can be deadly if left alive for too long. Falcon and Ridean can also be dangerous if allowed to linger.

Noteworthy Treasures in the Final Dungeon:

- **Sun Sword:** This is the second Sun Sword in the game. If you created a "Gungnir Robot god" (see the Nasty Woods section), then give the Robot/Cyborg two Sun Swords. Replace that weaker sword your Robot probably has, even if it's a Muramas (the Sun Sword offers a higher strength boost than the Muramas).
- **Karate:** This is the second Karate in the game. If you decided to give your Robot two martial arts as a "Gungnir Robot god" instead of armor (see the Gungnir Robot God tip), then go ahead and replace that Judo with a second Karate.
- **Arthur Armor:** This is one of two Arthur Armors in the game. If you have more than one Human, consider giving them both this armor. If not, it can be a toss-up who gets it. You can give it to your Robot/Cyborg, although the Second Parasuit may be a better choice. Mutants aren't really a good choice due to the reasons mentioned above in the Nasty Woods section, although it is entirely up to you.
- **Parasuit:** This is one of two Parasuits you can get in the game. As a reminder, you must unequip all your other armor (gloves, boots, helmet, and armor) in order to equip this. If you have two Mutants, consider giving them both a Parasuit. If not, you can give this second one to a Robot/Cyborg so they have all the immunities that come with it. A human is a good choice as well, but you may consider reading the "King Arthur tip" in the Nasty Woods section above.
- **PSI Gun:** This is the second PSI gun in the game. The most logical character to give it to is a Mutant or a Human that is using magic, but you can read the Nasty Woods section above for more info on the PSI Gun.
- **XCalibr:** Ah, here it is. The legendary sword! Exclibur has unlimited uses, never misses, and deals a good base damage (even if the character has low STR). It makes the most sense to have the Excalibur on a Human, although it can also be given to a Robot/Cyborg or even a Mutant if you lack a Human (or want to change things up). Now you can complete your "King Arthur" Human with the Excalibur (see the "King Arthur" tip in the Nasty Woods section above). It should be noted that the Muramas sword can actually deal more damage on single targets with mid-low defense (especially Human targets). However, against groups of monsters or monsters with high defense, the Excalibur is far superior since it partially ignores defense.

Human Tip:

- Now that you have Excalibur, you may be tempted to ditch all those agility-based weapons for your Human and focus on strength only. However, you should not be too quick to dismiss those agility-based weapons. Your Human will still benefit from the increased agility stat, if not just so they can dodge attacks and strike first. This is especially true if you have more than one Human and only one Excalibur!

WarMach:

- This battle can be rough depending on what WarMach decides to do. If you get unlucky, WarMach will use NukeBomb often, which can deal anywhere from 500 to 700 damage to each character. If you get lucky, WarMach will keep using weaker moves like Vulcan or Beam.
- Have your Mutant use a Heal Staff every turn for better success. If you REALLY want to ensure a victory, have Dad also use a Heal Staff every turn.
- Have your Robot/Cyborg(s) use a Gungnir every turn, or if you didn't give them one, use a Beam Gun or Samurai Bow. A Tank may also work, but will take a while with less damage.
- Your Human(s) should use the Excalibur or a Muramas sword, or the next best sword they have equipped.
- Your Monster(s) should use whatever will deal the most damage, such as ComVirus, Whirl, Beam, Tornado, Scorch, Touch, etc... If you happen to have a Catwoman or Rakshasa, use Accel until they start dealing mass damage (3+ turns of boosts would do it).
- WarMach has about 10,000 HP on average skill, 15,000 on Veteran, and 20,000 on insane.

Heart MAGI:

- Just like in vanilla FFL2, the Heart MAGI will bring all characters back to life during a battle when used, but has only one use (can be recharged). You must equip the MAGI and it will appear at the bottom of the inventory list during the battle, just like Masmune and Aegis. Consider giving it to a character near the last position, since the person using the MAGI will need to be alive or they can't use it to bring others back to life!

The Central Shrine Preparation:

- Before proceeding, make sure you have a handful of Heal staffs. You will need them for fighting Apollo and beyond. Also make sure you have a few Elixirs and/or Soft Potions, Curse Potions, and Eye Drops. Consider maxing out your inventory with tents, MINUS ONE SLOT!
- ALWAYS try to leave at least one free slot in your inventory to get those rare monsters drops. If you don't have any free slots in your inventory, monsters will NOT drop a thing!

Tip for all Characters:

- Now might be a good time to mention that any character in your party can get over 99 of any stat! This is only possible by equipping gear that grants stat boosts. For example, if you have 95 strength and equip a Parasuit, your strength will be 110. For Robots, they can easily surpass 99 of any stat by equipping multiple pieces of gear that boost that particular stat.
- If you desire to completely max out Humans and Mutants, you will need to boost their stats to 99 WITHOUT any stat-boosting gear equipped. Then, you can equip the stat-boosting gear to push them well above 99.
- If your Human or Mutant has 99 of any stat, they will no longer gain that stat after battle (although if you unequip stat-boosting gear and it drops below 99, they will gain stats again until they hit 99).

Apollo:

- This battle is unchanged from the original FFL2, which means it is still the toughest boss fight up until this point! Apollo will chat for the first five rounds rather than attack, using his Aegis shield each turn. Once Apollo transforms, he will begin to use Flare and Masamune every time. You will pretty much be dead in just a few turns unless you use Heal Staffs. Apollo has about 25,000 HP, but will start imploding/melting once he is below 10,000 HP or 20 turns has gone by - whichever comes first. There are two main methods to defeating Apollo:

Method #1:

- This method is usually easier, and merely involves staying alive until Apollo starts imploding/melting, which is 20 turns (including the first 5 turns before he has transformed).
- For this method, just give everyone a Heal staff who can use one. For the first 5 turns, you can do anything you want, including attempting to "Run" (it won't work, but it will pass the time faster).
- Starting on the 6th turn after Apollo transforms, have everyone use a Heal staff. You will need to have enough Heal staffs to last the next 15 turns. If you are still alive after those 15 turns,
- Apollo will begin to implode/melt. One turn later, you will win the battle as long as one character is alive besides Dad!

Method #2:

- If you think your party is strong enough, you can attempt to kill Apollo the "manly" way by either getting him below 10,000 HP so he implodes, or by getting him all the way to 0HP so he dies.
- For this method to work, you must use your powerful weapons AS SOON as the battle begins. Keep in mind that since Apollo uses the Aegis Shield, you will need to use defense piercing moves to get through his defense. The most powerful Attacks that will work include the Glass Sword, NukeBomb, Gungnir, Excalibur, Beam Gun, Flare, PsiShot, PSI Gun, PsiBlast, Tornado, Whirl, Sun Sword, and Cyclone magic. Other attacks that will work, but with lower damage include Scorch, Tide, Tank, Vulcan, and other guns.
- For the first 5 turns, have all of your characters attack. Don't bother Healing until Apollo transforms! Once Apollo transforms, have at least two characters use Heal staffs. Consider using Dad to Heal along with a Mutant. Your other characters should continue attacking. With any luck, Apollo will be below 10,000 HP before he decimates your party. Once he starts melting, you have to survive just one more turn!
- Remember that you must have at least one character alive at the end of this battle other than Dad to win.
- NOTE: If your party is near-maxed out from excessive grinding, it is actually possible to defeat Apollo in 5 turns before he transforms.

Isis:

- There are a few changes with Isis in this hack. The Aegis shield no longer grants O-Weapon and is limited to 5 uses (can be recharged), as mentioned above. It blocks all elemental magic, fatal magic, quake, poison, and stone.
- Masmune is a bit more powerful than before, which you already know if you equipped the MAGI on a character earlier in the game. It deals about the same damage on a single target as Flare.
- The TrueEye is now usable in-battle. It has 3 uses and will boost the Agility 15 points of any character you choose.

Monster Tip (level 10):

- You likely aren't going to stay a level 10 monster for very long due to the reasons discussed ahead. However, in the short time you are a level 10 monster, Some monsters that have both good attack and support are Sylph, Euryale, Sphinx, Rakshasa, and Giant.
- For attack only (no Curative spells), go with Garuda, Roc, Squid, Almon, Seiryu, Wyrms, Evil Eye, or Sandworm.
- For a defensive lead monster, go with Rock, Ironman, Moaner or Specter.

Mutant Tip (level 10):

- This is where Mutant(s) can become masters of magic! They can learn Flare, PsiBlast, and the new ability: PsiShot. Flare needs no introduction, and will cause mass damage to all.
- PsiBlast, although slightly weaker than Flare, comes with 15 uses instead of just the 5 uses that Flare has. For this reason, PsiBlast can be more useful than Flare if you lack attacks.
- The new ability, PsiShot, will only target a single group of monsters instead of everything on the screen - but it's actually more powerful than Flare! This means if you are trying to defeat those endgame bosses, PsiShot is going to deal more damage per turn than Flare. It will also never miss, just like PsiBlast and Flare. It should also be noted that PsiShot is identical to the PSI Gun, except now you can recharge the ability instead of losing it like you would with the Gun.

Central Shrine: The Slopes

- Before we get into the monsters encountered on the slopes, it is first worth mentioning some possible rare drops you may obtain!

Notable Rare monster drops (on the slopes and beyond):

- The following is a list of drops by monster. Some monsters have multiple rare, useful drops:
- **Oceanus:** Trident, Body Potion, Magic Potion, Speed Potion, Power Potion
- **Black Belt:** Speed Potion (1/10 chance), Judo (1/20 chance), Karate (1/40 chance), X-Kick (1/40 chance)
- **Paladin:** Paladin Glove, Ancile Shield, Sun Sword, Glass Sword, Defend Sword, Dragon Helm
- **Musashi:** Power Potion (1/12 chance), Elixir (1/20 chance), Muramas (1/35 chance), Ninja Glove (1/35 chance)
- **SS:** PSI Gun, Elixir, Magnum, FlameTw, Bazooka, Chainsaw, Temptat
- **Reptilian:** Body Potion, Revenge Sword, Elixir, Laser Dagger, Great Sword

Descriptions of Notable Rare drops:

- **Paladin Glove:** This is a new Glove that can only be obtained as a rare drop from the Paladin monster. You have a 1/8 chance of getting this when the Paladin drops something. This Glove has the highest defense of any glove at 25 defense points (compared to 10 of the Ninja Glove), and it boosts Strength a whopping 15 points as well (compared to 10 of the Giants Glove). Keep in mind that unlike Ninja Glove, it does NOT offer O-Weapon (and no other immunities). The Ninja Glove will actually defend your character better than the Paladin Glove thanks to O-Weapon. However, if you have a character that you'd rather boost strength for (typically a Human), then the Paladin Glove is a better choice. I do not recommend the Paladin Glove for a Robot/Cyborg since it will do nothing in the strength department for them. Mutants are not a bad choice if they have the O-All ability and you just want to boost their defense (or strength if you have them using swords for some reason). When equipped alongside Hecate Boots, Arthur Armor, and Dragon Helmet - your Mutant (or Human) will have 99 defense points (unless they gained any defense points throughout the game).

NOTE/SPOILER: The Paladin Glove is the best Glove for the optional post-game content, which is discussed in that section further below!

- **Trident:** This weapon can only be obtained as a rare drop from the Oceanus monster (about a 1/16 chance). Similar to Missile or NukeBomb, it attacks all monsters but deals anywhere from 400-1,000 damage! The Trident never misses and pierces defense. The Trident is best if given to a Robot/Cyborg, since it will become rechargeable with 10 uses and grants the same strength boost as the Gungnir. Consider replacing those Sun Swords, which have inferior strength boosts when compared to the Gungnir and Trident. You will definitely want to keep those Gungnir spears, since they still deal more damage on a boss or single group of monsters. Trident will be a nice addition to your Robot/Cyborg inventory, although you can also give it to Human or Mutant if you don't have a Robot/Cyborg, or if you don't want to replace anything in your Robot/Cyborg inventory.
- **Ancile Shield:** This is the best shield in the game, and grants O-All to the entire party. Unlike the Aegis Shield, this includes O-Weapon. The shield also blocks magic like the Mirror ability. This will be very useful later on! You can give the Ancile Shield to any party member, but you may consider the Robot/Cyborg if you wish to be able to recharge it. You will get one Ancile Shield in a treasure box, but you may also get unlimited Ancile Shields through semi-rare Paladin drops. With 20 uses, it's possible you can make this shield last through the end of the game on a Human or Mutant if used sparingly.
- **NOTE:** In the original FFL2, the Aegis Shield with Isis granted O-All, but now the Aegis has been downgraded a bit, as mentioned earlier. This decision was made since the Aegis Shield was a bit too unbalanced with unlimited uses, and also made most armors redundant. The Ancile shield eats up a turn of one of your other party members besides Isis, so it's a bit more balanced.

Central Shrine, Slopes #1:

Monsters: SS, Giant, Squid, Musashi, T-Rex, Reptilian, Oceanus (rare, 1/32 chance)

Notable Dangerous foe and tips:

- The following is a breakdown of the most dangerous foe encountered in the slopes:
- **Oceanus:** If you decided to complete the Nasty Woods, you already fought this monster. Here, it is a rare encounter in nearly all the slopes as well as a slightly more common encounter in the final floor of the Central Temple. Oceanus has a lot of HP and can be in groups of up to 4. It is extremely deadly with Whirl, Tide, and a very powerful new weapon called the "Trident" – a target-all attack that can nearly wipe out your entire party in one hit (this will not be used in Average difficulty). Oceanus is immune to all elemental magic and fatal magic, but lacks O-Weapon. You will want to take out Oceanus as fast as possible before it destroys you. As a reward, Oceanus can drop all kinds of nice stuff, including the Trident (about a 1/16 chance). Other nice Oceanus drops are mentioned above!
- **Musashi:** This guy has quite a bit more HP on veteran and insane skill when compared to the original game and tops out at about 3,750 HP (insane skill). Musashi can use various strong attacks against you, including the Samurai Bow (new in this hack). The most dangerous is when Musashi decides to counter attack, so you might avoid attacking Musashi with physical weapons unless you are confident you can bring him down (he can't counter if he's dead). Musashi has no immunity to anything. This means you can use Fatal Magic, Stone, Charm, or just about anything else you have. If you dare to use physical attacks, the Muramas sword is not a bad choice since Musashi is weak to it. As noted above, Musashi now has a 1/8 chance to drop a Power Potion.
- **SS:** These guys are not too overly difficult, but they do have a chance to use a PSI Gun on you. This will hurt quite a bit if they use it. Other moves include the Chainsaw, FlameTw, Temptat, Magnum, and Bazooka. Like most human opponents, these guys have no immunity to anything, so feel free to use Fatal magic, Stone, Charm, etc..
- **Reptilian:** This is a new monster that belongs to no family, therefore has no meat. Reptilian doesn't actually have high HP, but it does have insanely high agility and will often get an attack in before you do. It can use a Great sword, Revenge Sword, or a Laser Dagger (Jitte at higher difficulties). If you attack Reptilian with physical moves, it has a chance to counter with the Revenge Sword, potentially dealing mass damage. Stick with attacks powerful enough to kill the Reptilian in one shot if you can, or use magic. Reptilian has a 1/8 chance of dropping a Body Potion, which may not be of any use if all your characters are already at 999 HP.

SPOILER/NOTE: Body Potions have some use in the post-game, so you may consider saving them unless you are out of inventory slots (explained in the post-game section below).

- **Squid:** Although these monsters should be easy to take down, they can use 8-Legs - a very powerful physical attack. Consider using shields when facing them, or just take them out fast.
- **T-Rex:** You should be aware that T-Rex has incredible strength, and will do nothing but use "Jaws". If your lead character isn't beefed up with defense, consider using a shield when facing them.

Central Shrine, Slopes #2:

Monsters: Sleipnir, Roc, Reptilian, MadCedar, Wight, Cobra, Ushi-oni, T-Rex, Squid, SS, Oceanus (rare, 1/32 chance)

- Sleipnir and Roc you already know from facing Odin. Take out Roc first before he has a chance to use Tornado.

Slopes #3:

Monsters: Salamand, KingCrab, BlackCat, Sylph, Musashi, SandWorm, Evil Eye, Squid, Sleipnir, Roc, Garuda, Seiryu, Oceanus (rare, 1/32 chance)

- If you encounter Sylph, Garuda, or Seiryu, be sure to take them out fast. Otherwise, they can use Whirl/Tornado. Evil Eye can use Beam, which can also be deadly.

Slopes #4:

Monsters: Gloom, Cicada, Rock, GignToad, Squid, MadCedar, Wight, DarkRose, Almon, Pudding, Wyrms, KameRyu, Sphinx, Bl. Belt (1/26 chance), Paladin (1/26 chance), Oceanus (rare, 1/32 chance)

Notable Dangerous foe and tips:

- **Pudding:** this foe can be incredibly dangerous with its dissolve attack, so make sure they don't survive very long.
- **Paladin:** The strongest of the knight family, Paladins are very dangerous thanks to their powerful arsenal of swords as well as their high defense. If you let them linger too long, they can easily wipe out your entire party. The good news is that Paladins lack immunity to almost everything. They are susceptible to fatal magic, stone, charm, or any other status ailment. Paladin has a whole bunch of rare drops, including the Paladin Glove and even a Power Potion. Read above for more info on the Paladin Glove and other rare Paladin drops.
- **Bl. Belt:** Black Belts always appear alongside Paladins. They have high physical attack power, but otherwise are not as threatening. When dealing with these monsters, consider having your lead character use either a shield or defend sword. Similar to Paladin, Black Belts are not immune to any Fatal magic, Stone, or Charm. If you have the Calamity spell, this can often eliminate both the Paladin group and Black Belts group. The Black Belt has a 1/8 chance of dropping a Speed Potion. They may also drop any of the martial arts they use, including Karate.

Slopes #5:

Monsters: Rock, GignToad, Squid, Garuda, Seiryu, Mephisto, Rakshasa, Euryale, Moaner, Gloom, Cicada, BlackCat, Sylph, Bl. Belt (1/26 chance), Paladin (1/26 chance), Oceanus (rare, 1/32 chance)

- Euryale can use Whirl, although it's rare. Don't let them linger.
- Be sure to save before facing Fenrir (the cat NPC that blocks your path in the slopes).

Fenrir:

- Fenrir has far more HP than it did in the original game (Between 4,000-6,000 depending on the difficulty level). The good news is you only face one of them.
- Fenrir has a much lower chance of using Tornado than in the original game. The bad news is it has a brand new attack called "Bident", which can easily kill a character in a single hit. Tornado is still more dangerous - especially if Fenrir uses it multiple times in a row. If you get unlucky enough to have this happen, consider using a Heal staff every turn.
- The key to winning this battle (like many battles in this game) is to use your most powerful attacks to make the battle as short as possible. Examples include Gungnir, Excalibur, Flare, Cyclone, etc...

- **Rare Drop:** Fenrir will drop one of the following items (100% drop rate):
CatClaw, Elixir, Tent, Power Potion, Speed Potion, Magic Potion, Body Potion

NOTE/MINOR SPOILER: Unlike the original game, eating the meat dropped by Fenrir (and the next boss) is not the only way to upgrade your monster to level 11. This is because there is now an entire expanded section of the Central Shrine coming up in which you will face level 11 monsters – and most of them can drop meat! This also means that if you have more than 2 monsters, ALL of them can transform into level 11 monsters (this was not possible in the original FFL2). If you have both Mutants and Monsters in your party, feel free to give either one meat.

Slopes #6:

Monsters: DarkRose, Almon, SandWorm, Evil Eye, BlackCat, Sylph, Cobra, Ushi-oni, Giant, Ironman, BoneKing, Mephisto, Rakshasa, Oceanus (rare, 1/32 chance)

- Ironman has a lot of physical power along with a chance to use Quake. Due to their high defense, you will want to use defense piercing moves or non-elemental magic against them.

Slopes #7:

Monsters: Giant, Ironman, BoneKing, Euryale, Moaner, Specter, T-Rex, Shiitake, Pudding, Wyrms, KameRyu, Sphinx, Salamand, Hellstag, KingCrab, Bl. Belt (1/26 chance), Paladin (1/26 chance), Oceanus (rare, 1/32 chance)

Slopes #8:

Monsters: Specter, T-Rex, Shiitake, Salamand, Hellstag, KingCrab, Pudding, Wyrms, Mephisto, Rakshasa, KameRyu, Sphinx, Bl. Belt (1/16 chance), Paladin (1/16 chance), Oceanus (rare, 1/32 chance)

Tianlong:

- This boss is also very different from the original game. Tianlong has a whopping 8,500 HP in easy skill, 10,000 in Veteran, and 15,000 in insane difficulty. The good news is you only face one of them.
- Tianlong has a new move called "Inferno" that is just a tiny step below Flare. The problem will be if Tianlong uses Inferno twice in a row. Tianlong also has Tornado, which is almost as deadly.
- Have your Mutant and possibly someone else use a Heal staff every turn if you are struggling to win, and use your most powerful attacks. Tianlong has O-All, so defense piercing moves and magic are best.
- **Rare Drop:** Tianlong will drop one of the following items (100% drop rate):
Elixir, Tent, Power Potion, Speed Potion, Magic Potion, Body Potion

NOTE/MINOR SPOILER: As stated above in the Fenrir boss section, there are plenty of ways to get level 11 meat coming up. For this reason, don't be afraid to give the meat dropped by Tianlong to a Mutant if you need better magic more than you do a better monster.

Central Shrine, Floor 1:

Treasures: Glass Sword, Muramas

Monsters: Basilisk, Madam, GigaWorm, Treant, Earth, Scarab, CyberPod, Ghost, Mazin, Wizard, Titania (1/16 chance), Chiron (1/16 chance), Rhyos (1/26 chance), Zilant (1/16 chance), Oceanus (1/32 chance)

- Welcome to the first of three brand new floors in the newly refurbished/expanded Central Temple! The first thing you may notice is lots of new monsters that you never faced in the original FFL2, and all of them are level 11. Any fan of the original game will know that you could transform into a level 11 monster, but not actually fight them (the highest level of monster you fought was level 10). Now you can face every single level 11 monster. Be warned that they are NOT easy, but with some good strategy, they are very beatable...
- Since this area is completely new, there is a crude map in the "Maps" folder included with the hack (courtesy of Saga2edit).
- There are in fact some treasures in this area, and some optional buildings along the way. You can only enter one building at the moment, which has a blue circle over it on the map. The others you cannot enter (yet).

- In the building you can enter, there is a jukebox to change the music, and a pebble NPC that can stop the screen from shaking. The fairy merely tells you to return after you have saved the world *hint hint*. This Fairy will also give you more tips later.
- If you get lost on this floor, just know you will want to head to the lower left corner (after obtaining the treasures).
- When you come to the first intersection in the path, head south until a dead end, then go west to find a treasure (circled in red on the map). Then head back up to the intersection, and go west. At the next intersection, head north for another treasure. Now head south back at the intersection, and go toward the building at the end (circled in green on the map).

Notable Rare Drops (for the main central shrine):

(Most of these items are already listed and discussed above, but now they are more common with these monsters appearing more frequently in the main Central Temple area.)

- **Oceanus:** Trident, Body Potion, Magic Potion, Speed Potion, Power Potion
- **Black Belt:** Speed Potion (1/10 chance), Judo (1/20 chance), Karate (1/40 chance), X-Kick (1/40 chance)
- **Paladin:** Paladin Glove, Ancile Shield, Sun Sword, Glass Sword, Defend Sword, Dragon Helm
- **Musashi:** Power Potion (1/12 chance), Elixir (1/20 chance), Muramas (1/35 chance), Ninja Glove (1/35 chance)
- **SS:** PSI Gun, Elixir, Magnum, FlameTw, Bazooka, Chainsaw, Temptat
- **Reptilian:** Body Potion, Revenge Sword, Elixir, Laser Dagger, Great Sword
- **Intrcept:** Module (1/35 chance), NukeBomb (1/35 chance), Remedy (1/35 chance), Beam (1/17 chance), Missile (1/17 chance)
- **Tank:** Tank, Missile, Vulcan, Bazooka
- **Wizard:** Magic Potion (1/10 chance), Hecate, Flare, Mage Staff, Wizard Staff

Notable Dangerous foe and tips:

- **Rhyos:** This is the highest "Chimera" monster. You only face one at a time, but it has around 5,000-7,500 HP depending on the difficulty chosen, and will recover about 400-750HP each turn. Rhyos is NOT in fact immune to stone. If you have some form of petrify, you can attempt a one-shot. Otherwise, the biggest threat in this battle is Comet - a new target-all ability that is barely a step down from Flare. Consider having a party member heal each turn. The other concern is the powerful "3-heads" attack that will obliterate any character lacking O-Weapon and/or high defense. Rhyos will sometimes "Buff" itself, which will make 3-heads even more powerful. Consider a Shield or Defend Sword.
- **Zilant:** This is the highest "Wyrn" monster, and has the potential to be even more deadly than Rhyos. It has between 3,000-7,000 HP depending on the difficulty level, and can use Tornado as well as Inferno. Inferno (discussed earlier) is like Comet - a small step below Flare. The good news is that Zilant does not recover between turns unlike Rhyos - but it does have O-All. Consider using Heal to recover from Tornado, and use your defense piercing moves (you know the drill). Zilant does not have a physical attack as powerful as Rhyos, but a shield will help.
- **Wizard & Mazin:** These two monsters will sometimes appear together, which can be a deadly combo. Wizard has the potential to be the deadliest of them all, thanks to the small chance it will use Flare and PsiStaff - a new ability that targets a single character but can deal an incredible amount of damage. You should take out the Wizard(s) first in this battle. Wizards only have about 1,000 HP, but they will often get in a strike first thanks to their high agility. Mazin, although not AS deadly as Wizard, can still use Beam and X-Bash. With very high attack power, a lead character with a shield would be wise, or at least O-Weapon + high defense. Once the Wizard(s) are dead, you can target Mazin, who has about 1,100 HP (less on easier difficulties). Mazin has O-Change, so use those defense piercing attacks.
- **Madam:** This butterfly monster has the potential to use Tornado. Kill it first when it appears.
- **Ghost:** The Ghost will use Touch often, which is deadly. Have your lead character use shields or a Defend sword when facing Ghosts, and make sure you take them out promptly.
- **Chiron & Titania:** These two monsters often appear together, or sometimes just Chiron. Both are dangerous, but you will want to take out Titania first. Titania has a high chance of using Whirl, and a slightly lower chance of using PsiStaff - a new move that will more than likely kill a single character in one hit. Chiron has O-Change, so use those defense piercing attacks. You only have to watch out for Chiron's bow - the Gandiva - which can deal a lot of damage even if the character has decent defense.

Robot/Cyborg Module Tip:

- As noted above, the "Intrcept" monster has a rare chance of dropping a Module, and you can also obtain one in a treasure box coming up. The Module is a new robot specific item in the game. It will NOT do anything for any other class! The Module boosts Strength AND Agility 28 points for the robot. This is the only item that boosts both categories while only taking up only one slot.
- This is a good option to replace those items that your Robot never uses. Karate is a good example. If you have a "Gungnir Robot god" (see above in Nasty Woods section), then you may consider replacing a Karate (or Judo) with the Module to boost the damage of the Gungnir spears (and other swords the Robot may have equipped).
- If you get enough Modules, you can eliminate some of those unnecessary weapons/items taking up space and replace them with something more useful, like armor. Alternatively, you can just focus on Strength/Agility and ignore Defense altogether if your Robot/Cyborg is in the last position of the party.
- **NOTE:** In terms of agility, Karate will still offer a slightly higher boost at 32 points (versus 28 points for the Module). However, because the Module also boosts strength, it is a better choice if you have a robot wielding the Gungnir and/or other swords.

Monster Tip (level 11):

- Because there are so many good level 11 monsters with a lot of new abilities, there is another document included with this hack devoted to just level 11 monsters! See the document "Monster Guide" for more info. That being said, you can't truly go wrong with most level 11 monsters, but some good all-around monsters are Fenrir, Tianlong, Zilant, Rhyos, Chiron, Titania, or Stheno. These monsters can, for the most part, attack, defend, and support the party.
- It should be noted that Lich, Kusanagi, and CyberPod have unique abilities that can kill just about any monster in one hit. Lich has Scythe, Kusanagi has Critical, and CyberPod has Hyper. These will not work on Haniwa or some bosses.

Central Shrine, Floor 2:

Treasures: Ancile, Gungnir, Flare Book

Monsters: SS, Intrcept, Tank, KingToad, Kraken, Hafgufa, Cerberus, Beholder, CyberPod, Lich, Ghost, Mazin (1/16 chance), Wizard (1/16 chance), Rhyos (1/16 chance), Zilant (1/26 chance), Oceanus (1/32 chance)

- This floor is a bit more maze-like than the previous one, but it's really just a grid shape.
- If you head all the way south and west until the end, there is a treasure box with the Gungnir spear (see the map for floor 2; the treasures have a red box around them).
- Now go back east until the first intersection, then head north until the end, then head west until the dead-end. There is another treasure box with an Ancile shield.
- Next go back east to the second intersection (back at the starting tower), and head north inside the tower. At the next intersection (almost back at the start), head west. At the next intersection before the dead-end, head north. From here there are only two ways to go. East takes you to a dead-end with a treasure box containing a Flare book. West takes you to another tower where the exit to this floor is (circled in green on the map).

Notable Dangerous foe and tips:

- **Lich:** This menacing looking monster has a chance to use Flare along with all kinds of Fatal magic. You will definitely want to take Lich out first when he is accompanied by other monsters.
- **Beholder:** With their high agility, the Beholder might get off several Beam attacks before you can kill them. It would be wise to have your character with the highest agility take these guys out as fast as possible.
- **Tank:** The Tank is the most advanced robot you can/will face in the game. As its name suggests, it will regularly use the Tank weapon on you. This means physical attacks will frequently not work, so focus on defense piercing moves instead (Excalibur, Gungnir, Beam, non-elemental magic, etc...)
- **Intrcept:** This flying Robot will regularly use Beam Guns on you, along with FleshRot (only works on Humans/Mutants), ComVirus (only works on Robots), and Missile. The most damaging here will be Missile, since it will deal about 200-300 to each character. Intrcept has the chance to drop the rare Module, as mentioned above.

- **Kraken:** This monstrosity has the chance to use 8-legs, which can easily kill a character in one hit, along with Whirl. Make sure to take them out quickly! They have 1,500+ HP on insane difficulty, which is more than most regular monsters.

Central Shrine, Floor 3:

Treasures: Power Potion, Speed Potion, Magic Potion, Module

Monsters: Stheno, Gargoyle, T-Rexaur, Su-Zaku, Hydra, Kusanagi, Titania, Chiron, Cerberus, Athtalot, Beholder, CyberPod (1/16 chance), Lich (1/16 chance), Ghost (1/16 chance), Zilant (1/16 chance), Rhyos (1/26 chance), Fenrir (1/32 chance)

- This floor can seem confusing at first, but it's easy once you learn the layout. First proceed along the bridge until the first intersection. Go west here to find a treasure (speed potion), then go back and head south.
- At the second fork, if you proceed west until almost the end, there will be another intersection. Go north here to another treasure box: a Module.
- Go back to the previous intersection in the path, and head south. The next intersection is almost two intersections combined into one. Continue south here for another treasure (Magic potion).
- Go back to the double intersection, and head east. This final path is long, but straightforward. There is another treasure box along the way with a Power potion.

Notable Dangerous foe and tips:

- **Stheno, Gargoyle, and T-Rexaur:** The Gargoyle should be the main concern here since it can use Tornado. It can also Heal other monsters in the formation and reflect magic back to you via Mirror. Stheno wields a dangerous bow called the Gandiva (similar to Chiron). This Bow can deal anywhere from 400-800 damage on average. Stheno can also use Charm, Mirror, and elemental magic. Don't let Stheno linger too long either! T-Rexaur is a physical menace with the highest attack power of just about any monster. Consider having your lead character use a shield until these guys are down.

Zirok:

- At the end of the 3rd Floor, you will see a gnarly looking beast blocking your path. This is a new boss by the name of "Zirok". This is an ancient demon who was not happy with Isis last time she was here (presumably 1,000 years ago). As such, you must face this demonic creature.
- Before going into battle, make sure you have at least two characters with Heal staffs. It's possible you will burn through all 15 uses of a single Heal staff, so two of them for both characters is not a bad idea. Another trick is to give your slowest character a Heal staff along with your fastest character. With any luck, your fastest character will heal the party at the start of the turn (before Zirok attacks), and your slowest at the end (after Zirok attacks).
- Make sure you use a Tent to replenish your abilities before this battle. This is especially important if Isis used up her "Heart" MAGI. The Heart MAGI will be your lifeline should the battle go south. Finally, Make sure your lead character has enough defense along with O-Weapon (Ninja Glove would be best), or use an Ancile shield to grant O-ALL to the entire party at the start of the battle.
- Zirok has more HP than any other boss in the normal game: 40,000 HP on insane skill, 25,000 on veteran skill, and 15,000 on average skill. The good news is that Zirok lacks O-Weapon, so you can deal more damage than you normally would against previous bosses like Magnate, WarMach, and Odin. The trick to this fight is being able to survive long enough to kill Zirok.
- Zirok has 6 abilities total. His most common is 2-Bites, which can inflict a lot of physical damage. Your lead character should have high defense and O-Weapon, or use the Ancile Shield at the start of the battle. Do NOT have your lead character use a shield every turn, since it will be necessary to have two characters healing while the others attack to chip away at Zirok's large amount of HP. Zirok can also use Comet, Flare, and PsiShot.
- If you have two characters Healing every turn, you should be able to survive Flare and Comet. PsiStaff is the most deadly since it can kill a single character in one hit, but thankfully it is more rare than other attacks. Zirok can also use Calamity and Curse, both of which you should be immune to if you use the Ancile Shield or even the Aegis Shield at the start of the battle. Anyone not using a Heal staff should be attacking Zirok.
- If you find your healers to be too slow, try using Isis's TrueEye to boost their Agility.
- If you have a Robot/Cyborg, use Gungnir, or at least a Samurai Bow. Have a Human use Excalibur, and have your monster use whatever their powerful move is. It might be wise to

choose a healing monster for this battle, but another option is a monster with "Accel" or "Buff". If you spend multiple turns buffing your monster, they will start dealing massive damage against Zirok. See the level 11 monster guide for a list of monsters that have accel and buff!

- Your Mutant will likely be Healing. If not, PsiShot is a decent attack against Zirok. Isis should use Masmune every turn. If you lose more than half of your team, have Isis use "Heart", which will bring them all back to life. You should wait as long as possible to do this, since it is your only lifeline!
- It might take 15-20 turns, but with some patience, Zirok will fall.

Central Shrine, Floor 4, final area:

Treasures: Life Potion

Monsters: Bl. Belt, Paladin, Susanowo, Fly Lord, Musashi, Deathcap, Reptilian, Arachne, SlimeGod, Dagon, Gengbu, Oceanus, Tianlong (1/16 chance), Revenant (1/16 chance), Wizard (1/16 chance), Haniwa (1/26 chance), Fenrir (1/32 chance)

- This is it; the final floor in the Central Temple! This area is unchanged from the original game, minus the monster types that will appear. The monsters are the hardest in this area by far, but they also offer bigger rewards. If you choose to stat gain in this area, you may find Black Belts, Musashi, Reptilian, and Wizard. This means you can get Speed Potion, Power Potion, Body Potion, and Magic Potion drops. Also, because the monsters here are level 11, you should get stat boosts more frequently.
- There is a single treasure on this floor near the north east part of the maze: a Life Potion. This is a new item that you only get once (kind of). The Life Potion has 3 uses and acts the same as Heart. It will bring all characters back to life when used in battle. Save these potions for the final boss if you can. Although it's possible to beat the final boss without it, the Life Potion will help immensely!
- There are some very powerful monsters on this floor. Some of them you have already fought, and some of them you have not. There is a 1/16 chance you will encounter Tianlong (you already fought one on the slopes), and a 1/32 chance of encountering Fenrir (also a boss fight on the slopes). Some new monsters/formations you should watch out for are the following:

Notable Dangerous foe and tips:

- **Arachne, SlimeGod, Reptilian:** By this point you probably already faced Reptilian, but SlimeGod and Arachne are new in this area. Fans of the original FFL2 will know the SlimeGod as one of the best transformations your monster could have. Namely, this was due to the PsiBlast ability. Be warned that SlimeGod can now sometimes use PsiBlast on YOU, so be sure to target it first! SlimeGod will also pack a very powerful punch with Dissolve. The next danger is Arachne, since it has a small chance of using Tornado. Arachne should be targeted after SlimeGod. Reptilian is not a massive threat, although be careful to avoid attacking them with physical attacks in case they counter with a Revenge Blade (this will deal massive damage).
- **Fly Lord, Musashi, DeathCap:** You may have already encountered Musashi on the slopes, but this time he is accompanied by two friends. Neither one of them is overly difficult, but you might consider killing Fly Lord first due to their chance of using a powerful Absorb attack. DeathCap can use Calamity on occasion, which could wipe out your characters if you don't have immunity to fatal magic. Consider using an Ancile shield or Aegis shield at the start of the battle if you aren't already immune. For Musashi, consider using Fatal magic against him since he has no immunity to it (there are more strategies above with Musashi).
- **Black Belt, Paladin, Susanowo:** You may have encountered Black Belt and Paladin already (see above for tips), but just be aware that their new friend, Susanowo, has a chance to use Tornado. You may consider taking him out first before dealing with the other two!
- **Oceanus, Genbu, Dagon:** Oceanus is not new (read above for more info), but Genbu and Dagon are. Oceanus will be the biggest threat of the 3, but you may consider taking out the other two first so you aren't ganged up on. Oceanus has a lot of HP, so it will likely take a few turns to defeat the group. The hardest part of this battle is the incredibly high defense of both Genbu and Dagon. High impact magic like Flare, PsiBlast, or PsiShot are the way to go.
- **Revenant and Wizard:** You probably already know the Wizard by now (see above for more info), but the Revenant will be new. Most of what this monster can do is stopped by good armor and/or shields, but it has a fairly high chance of using touch. It might still be best to take out the Wizard first, but Revenant can also pose a threat. Consider having your lead character use a good shield in this battle to block touch.

Haniwa:

- Ah, the legendary monster itself (it's even in the hack name)! The Haniwa is by far the toughest regular encounter; it is even debatable if it's tougher than all the bosses you can fight. Haniwa has between 10,000 HP and 12,000 HP depending on the difficulty you chose. This may not seem too bad compared to most bosses, but the issue is how Haniwa recovers 10% of it's HP every turn. This means if you aren't dealing more than 1k-2k damage per turn, you should just run away (which is possible, unlike with the rest of the monsters in the final area). Now, any fan of the original game will remember being able to end this battle quickly by just using a Hyper Gun. This time, it will NOT work. You will need to fight Haniwa the old-fashioned way.
- Haniwa has 4 abilities: Bash, Quake, Flare, and the Seven Sword. The first two moves on that list can be easily blocked/avoided with good armor or shield. The latter two are where the danger lurks. Flare can nearly wipe out your entire party in just one hit. Most characters will have about 10% of their HP left if they survive. Robots/Cyborgs may not survive at all since they don't have any Mana (Mana reduces the damage delt by Flare and other magic). If Flare wasn't bad enough, the Seven Sword is almost worse. The chances of a character surviving an attack with Seven Sword is naught unless they are using a shield. The tough part is being able to afford having a character use a shield every turn instead of attacking when Haniwa recovers 1,200 HP. For this reason, you might have to just take your chances and not use a shield at all, except at the start of the battle to block Quake the remainder of the battle. You should also have a character or two using a Heal Staff every time Haniwa casts Flare, which will further prolong the battle. The best moves, as with most bosses, are defense piercing or never-miss. This includes Gungnir, Excalibur, Beam Gun, Flare, PsiShot, PSI Gun, PsiBlast, Tornado, Whirl, Sun Sword, Cyclone magic, Glass Sword, NukeBomb, Samurai Bow, etc...
- For monsters, the best abilities are Touch, Beam, Inferno, Comet, Gandiva, Bident, Scorch, BioChem, and Tide. If you have a monster with Buff or Accel, you will definitely want to spend 3+ turns boosting the agility/strength of that monster, then proceed to attack. This should dish out massive damage. You just have to hope Haniwa doesn't use Seven sword on them while they buff/accel.
- Isis should use Masmune most of the battle, which will cause about the same damage as Flare. She should also save that Heart to bring your characters back to life when things get bad.
- In the end, the battle against Haniwa might involve some luck that he doesn't use Flare and/or Seven Sword regularly, but you CAN typically win with a strong party after about 10-20 turns. There is about a 1/8 chance Haniwa will drop the famed Seven Sword when you win this fight (which is a higher chance compared to the original game).

Spoilers, Seven Sword Drop:

Veterans of the original FFL2 will know the rumors about obtaining this incredibly rare sword. Even more lucky yet are those who actually managed to get one! The good news is that Haniwa has a much higher rate of dropping one than before at 1/8 chance. In the original FFL2, it was closer to a 1/64 chance. The sword itself comes with 7 uses and can hit up to 7 times. The Seven Sword has a better chance of working when given to a character with high strength and agility. If either stat is low, it won't perform as spectacularly as it could. With high strength and agility, it will not be uncommon to see this sword dealing anywhere from 2,000 to 5,000+ damage. Considering how rare this sword is, you could give it to a Robot/Cyborg to gain 3 permanent, rechargeable uses. The only drawback is the complete lack of stat boosts you gain with the sword, so it will eat up a slot with no benefits (beyond how powerful the sword is). Alternatively, you could give it to a Human and choose to use it very sparingly! Consider saving it for the last boss, or for the post-game (or use it against another Haniwa).

Other Drops: It should be noted that as of version 2.0, Haniwa can also drop Body/Speed/Magic/Power potions. There is also a 1/16 chance of it dropping a Life Potion, Gungnir, Arthur Armor, or Parasuit!

Preparing for the final boss:

- This is that part of the game when you must decide if you want to beat the final boss right away, or if you want to max out your characters, get some rare drops, and possibly even the famed legendary sword. However, there is a reason you might not want to linger too long here, which is mentioned in a spoiler box in a few pages.
- There are many ways to prepare for the final boss, but rather than list it all in one big paragraph, here are tips for each character class:

Monster Preparation Tip:

- If you want to play the final battle safe, consider picking a monster that can heal your entire party. It's an even bigger bonus if the monster you choose has high agility, like Chiron with 95 agility. This is because a monster with high agility will get to heal your party before the final boss attacks each turn. Other good choices for healing include Gargoyle with 94 agility, and Madam with 94 Agility. Earth is a bit slower but has higher defense.
- Treant is a fantastic choice too, since it has the Life ability along with Heal and can bring your party members back. The only downside to Treant is lower agility at 78.
- Alternatively, you may choose a monster that deals damage against the final boss, like Titania (PsiStaff), Ghost (Touch or Flare), Rhyos (Comet), Tianlong (Inferno), Lich (Flare), Athtolot (Flare), Beholder (Beam or Comet).
- Similar to the strategy mentioned for Haniwa, you can always pick a monster with buff or accel and have the monster boost its stats for 3+ turns before attacking for mass damage. Examples include Tianlong, Fenrir, Rhyos, Kusanagi, Kraken, T-Rexaur, Susanowo, and Cerberus
- See the "Monster Guide" document for a list of all possible monster choices!

Mutant Preparation Tip:

- It's a good idea to switch your Mutant(s) back and forth between healing and attacking during the final boss battle. The best attacks by far are PsiShot or the PSI Gun. If you don't have either, use Flare (buy a Flare book if you have to).
- Don't forget to equip at least one Heal staff on the Mutant. Two is recommended.
- Also consider placing your Mutant in the last position and give them the Life Potion from the treasure chest if you haven't used it. Should the Mutant survive an onslaught, they can bring everyone back to life at that critical moment. Keep in mind you do NOT have Isis to help you in the final battle, so you won't get the use of the Heart MAGI.

Human Tip:

- It can be tricky deciding what to have your Human do. You might be tempted to use Excalibur, but it will be dealing less than 500 damage unless you have over 99 strength (with gear). As such, you might be better off equipping a Human with Beam Guns, since they pierce the high defense of the final boss. If you saved up Glass Swords, now is the time to equip and use them.
- If your Human has high Mana, you can also give them a PSI Gun, which will definitely be superior to a Beam Gun. If you lack a healer and your Human has high Mana, give them a Heal staff.
- Your Human is probably the best choice for the lead character to take hits. Load them up with all your best armor (see the "King Arthur" tip earlier for some good choices), and equip an Ancile shield if you have one.

Robot/Cyborg Tip:

- Your Robot/Cyborg should probably be your main source of damage against the final boss.
- If your Robot is low in the strength department and is dealing less than 500 damage each turn, then equip your Robot with a Beam Gun. This will deal about 500-550 damage consistently every turn.
- If you followed the "Gungnir robot god" tips above in this guide, you can easily create a Robot that deals 700-900 damage against the final boss with the Gungnir spear.
- Your Robot/Cyborg just needs at least three top swords, such as x2 Gungir and x1 Sun Sword, or x1 Gungnir and x2 Sun Swords, or x3 Gungnirs (if you got the rare Odin Drop).

SPOILER: In the original game, the fun ended once you defeated the final boss. In fact, with maxed out characters, you could beat the final boss in one anti-climactic turn! However, this time around you should consider going straight to the final boss when ready. This is because afterward, you have the option to continue playing with a post-game quest! You can then continue beefing up your characters and maybe even go for that Seven Sword if you desire (not required of course). Should you proceed with the post-game quest, you will face brand new bosses that require the strongest characters possible.

Arsenal:

- Here it is, the final battle (kind of!) This battle will be significantly different on insane difficulty compared to Veteran and Average. Arsenal has only slightly more HP when compared to the original game (about 11,000 vs 10,000). However, Arsenal comes with Recover, an ability that recovers 10% of its health every turn. This means Arsenal will recover about 1,100 HP every turn - similar to a Haniwa. On Veteran and Average difficulty levels, Arsenal is not all that much different from the original, minus some new abilities it may use.
- At the start of the battle, you should use the Ancile shield to lessen the damage of certain attacks carried out by Arsenal in this battle. Then, you must destroy the 4 laser cannons before you can attack Arsenal itself. They have about 1,000 HP each. Target-all attack spells like Flare are useless at this point since you can only attack one laser cannon at a time. Heal only if you get low on HP, and don't delay destroying the Cannons or they will repair/revive.
- Once the 4 cannons are gone, Arsenal will enter its second phase. You can now damage Arsenal in this phase. In the original FFL2, the only attack Arsenal could use in the second phase was "Smasher". This time around, it can also use a Beam Gun, NukeBomb, and ComVirus (although Smasher is the most common). The Smasher Attack can also deal far more damage than it once did. In some cases, it can exceed 800 (much less on average difficulty).
- Make sure your characters are healed between turns. You might not actually need to use a Heal Staff in this second phase unless Arsenal uses a NukeBomb. Instead, you can use a normal Cure spell on whichever character got hit with Smasher/Beam. If you are unlucky enough to have Arsenal use ComVirus on your Robot/Cyborg, it will probably kill them in one hit. You can always use a Life Potion if this happens, if you have one.
- Arsenal will begin recovering about 1,100 HP per turn at this point (insane difficulty only), so you might need to have 3 out of 4 of your characters attacking and one healing. See the previous section (preparing for the final boss) for some good attacks to use.
- The third and final phase begins when Arsenal has about half of its HP left. It will then launch its main Smasher attack every single turn, which will deal anywhere from 20 damage to 750 damage, (a very wide range). You can choose to use 2 Heal staffs every turn at this point if you want, but it may be difficult to deal more than 1,100 damage per turn by doing so. Instead, just observe how much damage Arsenal causes each time with Smasher. If you happen to get a good turn and Arsenal deals less damage, then switch one of the Healers to attacking.
- Eventually, you should chip away at Arsenal's HP and win the battle.

Congratulations, you have beat the normal game! Now, read on to the next page if you desire another quest...

IV. POST GAME QUEST

SPOILERS: Once you have defeated Arsenal, you can use the elevator just like in the original FFL2 to exit the temple. Once back at the top, you will talk to Dad. Some ending music will play along with the usual dialog, but this time Dad will mention that he never got to thank Isis for saving him. Dad will then ask if you wish to go thank Isis. If you say "No", the game will begin the credits and end. If you say "Yes", Dad will join your party, and you can go back down the elevator (which will work from now on) to see Isis again. Alternatively, you may go back through the entire temple the long way if you so desire. You may notice that the monsters are back, so keep in mind that you must fight your way through like before.

Dad/Captain Tip:

- When you recruit Captain, his inventory and stats will be reset to what they were when you first recruited him before (a future version may allow his inventory to be saved, but we will see). Captain will seem very lackluster compared to your other characters by this time. As such, you will want to make him better, since he will be with you from now on. To do this, you will obviously need better equipment. Get him a good Helmet, Gloves, and Boots to increase those stats – or even a Parasuit. Remember that you can now equip AND unequip Captain!
- The only downside about Captain is that he won't get any natural stat boosts. However, you actually CAN boost his stats with potions! As of version 2.0 of the hack, stat boost potions can be dropped in many different places. Refer to the "drop" guide for specifics. You can make Dad much stronger if you want to spend some time farming these potions. Like any other character, Captain's stats can go up to 99, but you can push his stats higher with stat-boosting gear.

Isis loses MAGI:

- When you return to Isis, she will suddenly seem desperate and tells you about how she felt her power/MAGI leave her. She also sensed the presence of "7 ancient beasts" who were likely responsible for stripping her of her power. She requests that you go find the MAGI and return it to her, or all may be lost. Now another small quest begins for you!

Exploring the previously locked buildings:

- Remember those in the Central Shrine that had locked doors? Return to those now to see what is in them! This will be back on Floor 1 (check the map "CentralShrine-NewFloor1". The buildings on the map have a green "X" label on them).
- **Minor Spoiler:** Inside the larger of the two previously locked buildings (the one to the west), you will see someone you recognize: Byakko. You will also notice a Haniwa, and a treasure chest. If you speak to the the Haniwa, he will tell you to find the 7 Beasts first, then return to him. Byakko will tell you that he has learned his lesson, but that he also feels King Haniwa is more powerful than you are. Byakko will also give you a nice tip: that the 7 beasts will not be found in large dungeons.

The "Café":

- If you return to the center building with the fairy and Jukebox, you will now see a wizard type character standing there. This new NPC will tell you to return once you have defeated 3 beasts. Remember this for later! It should also be noted that the fairy gives you some tips.
- There is now also a spirit next to the Jukebox that will sell you items. This is very useful for grinding in the Central temple without having to leave!

The Shop:

- The other locked building, which will be on the east side, is in fact a new shop! The first thing you will notice is how outrageously expensive everything is, but don't worry; you can purchase this equipment slowly. Hopefully you will also have a lot of GP right off the bat to stock up on a few things. Some of these items you should already be familiar with, like the Ancile Shield, Arthur Armor, and Ninja Glove.

Noteworthy Items to Purchase:

- **Life Potion:** These are just about mandatory in order to survive some of the boss fights coming up. However, before you purchase any, keep in mind there is also a way to get 3 free Life potions every time you use them up (see the world 1 beast section coming up). If you need more than 3 Life potions at any time, then consider purchasing additional potions at the store.
- **Hero Helmet:** This Helmet is quite simply the best way to boost your stats. Mana, Strength, and Agility all go up 15 points on a Human or Mutant. The only downside to this helmet is the lack of immunities/protections. For this reason, the Robot/Cyborg will not really benefit much, since it will not gain any stat boosts either. This Helmet pairs up well with the next item discussed.
- **Angelic Boots:** These boots are potentially the best of all the endgame equipment. Although they don't offer much more defense than standard boots, they grant ALL immunities minus Fire and Poison. This means immunity to Quake, Stone, Fatal magic, thunder, and Ice. It also grants O-Weapon, so you can finally ditch those Ninja Gloves (and replace it with a Paladin Glove if you got one from the Paladin monster). If that wasn't enough, the Angelic boots also boost Mana and Agility 15 points, so you can also ditch those Hecate boots and Hermes shoes.
- **Falcon Sword:** This sword is a good boss killer on a well trained character. It has the potential to deal more damage on a single target than any other sword minus the Seven Sword. The catch is you need high strength and agility for it to work well. The Falcon Sword can hit the target two times, but if you have low agility, the sword might only hit or miss altogether. This sword will work well with Humans or Robots/Cyborgs (or Mutants if you trained them to use weapons). It will also boost the agility of Robots/Cyborgs by 32 points, which is the ONLY strength-based weapon to do so. If you still have that a Karate taking up space in your Robot's inventory, consider replacing it with this. The downside to this sword is that it can be blocked by shields, and the damage output is reduced by O-Weapon.
- **Railgun:** Clearly this weapon must be good with a price tag of 550,000 GP on insane difficulty? Well, yes, it is. The Railgun is basically a Beam Gun on steroids! It will deal fixed damage from 1,100-1,600 damage on a single target, and the damage is completely unaffected by defense or O-Weapon. It can be given to anyone, although the Robot/Cyborg is a good choice due to the rechargeable 10 uses you get along with an agility boost of 28 points (only slightly lower than Karate or Falcon Sword). This weapon is a boss killer to say the least. The downside is the sheer amount of GP it takes to purchase!

What to purchase first:

- Before going crazy and spending all your initial GP on a Railgun, instead consider purchasing a few cheaper items. For example, the Falcon Sword and Angelic Boots will initially be a lot more useful. Give a Falcon sword to your Robot/Cyborg and/or a Human. Save this sword for the upcoming boss fights. If you have a Human, purchase the Angelic Boots. You can now happily ditch those Ninja Gloves for your Human and replace it with the Paladin Glove (if you got one from a Paladin). Combined with Arthur Armor, your Human will now have extremely high strength, agility, and O-All.
- As mentioned already, you don't need to purchase too many Life Potions since you can get 3 at a time for free coming up, but if you have just a lot of GP to blow, then consider purchasing more than 3.
- Later on you can grab a Hero Helmet and ditch the Dragon Helmet, but consider saving this as one of the final purchases you make.
- With a Falcon Sword and Life Potions, you should be able to defeat most of the upcoming bosses. If you have a Mutant, the Parasuit is probably still the best choice.
- When you get more GP later, it's not be a bad idea to grab another pair of Angelic Boots for your Robot/Cyborg to make them immune to all (although having them use the Ancile shield might also suffice). You will need to purchase a Railgun later, but that is discussed further down the post-game guide.

Dad/Captain Equipment Tip:

- If you have the GP, the best equipment to purchase for Dad would be the following (once again, take your time):
- **Angelic Boots:** this will make him immune to everything except poison and fire, will grant O-Weapon, and will boost his Agility and Strength.
- **Hero Helmet:** This will boost his stats and defense even further.

- **Paladin Glove:** This is not available from the store, but is a rare drop from the Paladin monsters. If you can manage to get one, it will boost Dad's strength even more, making his Captain Sword better (or any other sword you equip on him for that matter). If you don't want to farm a Paladin Glove, consider a Ninja Glove instead.
- With all this gear equipped, Dad will have 3 free slots (if you use up the Heal Staff and Cure Book, which is easy to do). You might consider always leaving a Heal staff on Dad, and/or a Life Potion. The final slot should be a weapon to help you bring down bosses, like a Falcon Sword or a Railgun if you REALLY don't mind farming that much GP.

Finding The Seven Beasts:

- Now you may begin your hunt for the 7 Beasts mentioned by Isis. Don't worry if you haven't purchased all the equipment you want from the new Central Temple shop. Later on you might need some of that equipment, but for now you can likely progress without anything too fancy (with the right strategies).
- The 7 Beasts are found scattered throughout the worlds. As a general rule, they tend to be easier in the earlier worlds and harder in the later worlds. As such, they are listed here in order of their appearance, starting from World 1. If you wish to find them yourself without spoilers in this guide, then be sure to chat with all the villagers throughout the worlds. Most of them have different dialog in the post-game!

Back to World 1 (Ki's World):

- Before facing the first beast, stop by Ki's temple. She will thank you and give you a free Life Potion (which is actually x3 of them). Any time you use up all your Life potions, she will give you another x3 of them!
- The first beast can be found east of the second village (the village up north). If you remember all those mountains around Ashura's base (before it blew up), the beast is in the southeast part of those mountains.

Guha:

- This first beast can take a while since Guha has a lot of HP (10k – 30k depending on the difficulty chosen). However, your team should be dealing high damage by this point.
- Guha will spend most of its turns using Absorb. If you aren't prepared, this will sap HP from you and give it back to Guha almost every turn. Although you can still win by allowing this, it will involve a lot of healing and take much longer. A better tactic is to have your lead character use a shield/tank/defend sword each turn to block absorb, or better yet, transform your monster into something that can reverse the effects of absorb.
- A little bit of info about Absorb: Guha will NOT absorb HP when used against plant, rock, sword, or golem families of monsters, but it will still deal damage to them. Against Undead monsters, Absorb will actually take HP from the caster and give it to the monster! For this reason, if you have a Monster in your party, consider transforming them into an undead monster and put them in the lead. This will make Guha hurt itself instead of absorbing HP from you. If you lack a Monster, then consider having your lead character use a shield, as mentioned above.
- Any magic will work on Guha minus fatal magic and stone, so feel free to use whatever you want. Just go with your most powerful attacks, which you should have down to an art by this point!
- **Tip:** if you get yourself a chainsaw, you can kill Guha in a single hit if the character wielding it has over 105 strength. Any character with high strength + stat boosting gear could pull this off. Also the monster Lich can kill Guha in one hit with the Scythe. Kusanagi can sometimes kill it in one hit with Critical as well.

MAGI obtained:

- Defeating Guha will grant you with 1 of each primary type of MAGI. That's right, MAGI is back in your possession! Good thing too, since you will need it. Go ahead and equip MAGI on your characters as you did in the first half of the game.
- Consider giving your lead character Defense MAGI, while other characters get the MAGI that will boost their individual abilities (Power for a Human using Excalibur, Mana for a Mutant using spells, Speed for anyone using agility based weapons, etc...)
- You may also consider equipping Speed MAGI on a Mutant or Monster that will be healing your party so they can heal first before a monster/boss attacks. Sometimes this will give you the edge you need to win a battle.

- You will notice that Guha also grants the Pegasus MAGI. Now you don't have to purchase anymore Doors!

Back to World 2 (Desert World):

- The Second beast may be found in the desert of the second world. The easiest way to find it is to simply stand to the left of the town/village, and travel west until you hit the desert. As soon as you hit the desert, travel south until you reach a clearing. The next beast is in that clearing.

Jorgandr:

- This beast has more HP than just about any other boss (up to 60,000 on insane difficulty), although you can deal a lot of damage since it lacks O-Weapon. The main issue with this beast is not the amount of HP it has, but rather the amount of physical power it has. If you take no action to block attacks, Jorgandr can deal 1,000 - 2,000 damage per hit on a character using one of its two physical attacks (2-Bites or 4-Heads). Basically, you will lose a character every time it hits unless you block the attacks.
- The Ancile shield is your best bet here on the lead character. If you lack one, the Defend Sword might suffice, although it only blocks attacks 70% of the time while the Ancile has 100% block rate. A Tank might work also, but is pretty weak at this point and only has a 60% chance of blocking attacks.
- Besides physical attacks, Jorgandr can also use SndStorm, Sleep, and PsiBlast. PsiBlast can just about wipe out your entire party if they aren't healed all the way, but the good news is that Jorgandr seldom uses it. SndStorm can also hurt due to Jorgandr's high Mana, but nothing you can't handle (about 400-500 damage per character).
- By using a shield, Defend Sword, or some other move with your lead character to block attacks, the rest of the battle just involves patience. Have your Mutant or Dad (or both) use a Heal staff whenever Jorgandr uses SndStorm and PsiBlast, and use a Life Potion whenever Jorgandr kills one or more characters. Consider giving the Life Potion to your Mutant in the last position, or even to Dad (if you made him better with gear and/or potions). This battle is long, but very doable!

MAGI obtained:

- Along with one of each type of common MAGI, you will also obtain the TrueEye. You may once again use this MAGI to boost speed/agility during boss battles if you need it, although likely by this point you don't with all that stat-boosting gear!

Back to World 4 (Apollos World):

- The third beast may be found south of the port town. Go into the sea and travel south until you hit the wall at the end, then travel east. You should see the beast wandering around in this area.

Neptune:

- As it turns out, those villagers were correct. Neptune does exist! This beast is a step up in difficulty from the other two beasts. Neptune has less HP than the previous beasts (about 28k HP on insane difficulty, 18k on Veteran, and 9k on average), but he has far more deadly attacks.
- Neptune can use the incredibly powerful PsiStaff. This will either kill a character in one hit, or leave them with very little HP left. You could use a heal staff every turn, but this will prolong the battle and allow Neptune to eventually use Whirl on you, or even worse, a Trident. The Trident will deal 800-900 damage to every character. If you get unlucky enough to have Neptune use Trident twice in a row, it will likely be game over.
- A good option for this battle is to place a character in the lead with an Ancile shield, and have them use it every turn. The Ancile shield will repel PsiStaff and Tide. Your most powerful attackers should focus on killing Neptune promptly.
- Try to only use healing when necessary (when Neptune uses Whirl or Trident), and instead focus on killing Neptune as fast as possible. Alternatively, you can just use a Life Potion to give everyone their full HP and not heal much at all (Life potions will heal others in addition to bringing them back to life)
- Another option would be to have your Mutant(s) attack every turn with a Rune Axe, which will repel PsiStaff and Tide.

- If you have a Monster with the Accel or Buff ability, use this for 3+ turns and start dealing mass damage with attacks.
- If you are struggling to win this, purchase more Life potions back at the Central Temple and have two characters with them (possibly a Mutant and Dad). This will lessen the chance of Neptune killing the only character that can bring others back to life.
- **TIP:** If you have the monster Lich, it can kill Neptune in one hit with the Scythe. Kusanagi can sometimes kill it in one hit with Critical as well. Neptune can technically be killed by a chainsaw, but you would have to have over 160 strength, or about 140 + lots of Power MAGI. The only character that can achieve this is a Robot/Cyborg.

SPOILER: You may be shocked to see that Neptune drops meat (100% drop rate). Eating this meat will turn your monster into a secret hidden monster: Neptune himself! This is a very useful monster transformation for the upcoming battles. Neptune comes with PsiStaff, Trident, Whirl, Tide, Cure, Life Potion, O-All, and Surprise.

WARNING: if you eat ANY OTHER MEAT after transforming into Neptune, you will transform back into a level 11 monster and lose Neptune! There is actually one more chance later to get Neptune back, but this would be a huge loss unless you prefer a different level 11 monster for some reason...

The SeerSuit:

- Remember the wizard NPC back in the central temple "Café"? Return to him since you have defeated 3 beasts. He will give you a "SeerSuit", which is a better Parasuit. In addition to boosting every single stat, it will grant 88 defense points and O-All. Perhaps the most unique trait of this suit is that it also comes with "Recover". You can't really go wrong with giving this suit to any character, but of course a Human or Mutant will benefit the most from the stat boosts. However, a Human would likely still have higher strength and agility from other gear stacked up. Likewise, a Mutant could have higher mana from other gear stacked up. A Robot isn't a bad choice, since it lacks recover. A Cyborg would be an ok choice as well, although it already has built-in recover. If all else fails, you can give it to Captain!

Back to World 6 (The Lost City):

- To find the next beast, you have to navigate back through the marsh south of the traveler's town (see the Lost City instructions earlier in the guide). Enter the old temple on the Northwest end of the map. Once inside the old temple building, go around the center room to the back part of it (don't enter the building where the Yojimbo mini-boss was). There you will see a throne with a monster sitting on it. This is the next beast.

Ballor:

- This fight will initially seem very difficult. Ballor has between 25,000 and 55,000 HP depending on the difficulty you chose, and some very deadly moves.
- The most common attack Ballor will use is Rune Axe. You must be aware that even though Rune Axe is his weakest attack, it will repel any magic back to you! Absolutely do NOT use
- PsiStaff, PsiShot, or any other spell that can be reflected back. Flare will work fine, or if you have a Neptune monster, use the Trident.
- The next move Ballor will often use is Scythe. Unfortunately, even if you have immunity to fatal magic, the Scythe could instantly kill a character.
- The other trouble with this battle is Ballor's tendency to use FleshRot. If you have a Human or Mutant as the lead character, this will decimate them.
- The solution to this battle is to place a Robot/Cyborg in the lead position, and have them use a shield or defend sword to block the Scythe and Rune Axe. A Monster might also work, but you might not have a good defense move with your current monster (Neptune doesn't have defense).
- The last attacks you have to worry about are Tornado and Inferno, but thankfully those are seldom used. Just be prepared to bring characters back with Life Potions, and use your most powerful attacks.

MAGI obtained:

- Defeating Ballor will grant you the Aegis MAGI. It's possible you can think of a use for it, but the Ancile Shield is always superior at this point of the game.

Back to World 7 (Venus World)

- To find the next Beast, exit Venus Town and travel to the west. When you are almost at the cliffs, you will see a monster slightly above you in the trees.

Deity:

- This beast is sort of a combination of Jorgandr with physical attacks and Neptune with magic attacks. The most common attack used here is 6-arms, which will deal very high damage if your character is low on defense, lacks o-weapon, and/or isn't using a shield.
- Deity will also often "Buff" itself, which will make 6-arms even more deadly.
- The other common ability is PsiBlast, which will target all party members. Deity can also use PsiShot, which will target a single character (mana-based).
- To at least block PsiShot and 6-Arms, have your lead character use an Ancile shield every turn. The only thing you truly have to worry about now is PsiBlast, which will attack all characters and require a Heal staff or Life Potion to recover. Deity has up to 30,000 HP (depending on the difficulty), which isn't as bad as some other beasts. Deity has O-All, so you will need to use those defense piercing moves and weapons.

RARE DROP: There is a 1/8 chance that Deity will drop the Angelic shoes. Even though you can purchase these, it's a very nice drop since it spares you from having to spend the gold!

MAGI obtained:

- Defeating Deity will grant you the Heart MAGI. This is potentially even more useful than it was the first time you had it, since you can give it to a Monster that otherwise cannot equip Life potions.

Back to World 9 (Edo)

- To find this beast, travel east until you get to Hanna's village. Once in front of the village, travel North across the bridge. Now travel around the backside of Hanna's village. To the Southeast of Hanna's village is the next beast.

Goryo:

- This humanoid Beast has the least amount of HP at 17k – 23k, but can wipe out your party fast if you don't defend. Dullahan's Falcon sword can deal 1,500+ damage to everyone if they aren't using a shield, even with O-Weapon!
- Avoid using normal swords and physical attacks against Goryo, or he will sometimes counter attack (which will deal insane amounts of damage). Instead, rely on magic attacks and weapons that don't allow a counter attack (Gungnir and Excalibur qualify).
- Similar to the other bosses, the strategy is to have your lead character use an Ancile shield and/or Defend sword each turn. Once you do that, this battle should be over pretty quick when you attack with your most powerful moves.
- If you have the monster Lich, it can kill the Goryo in one hit with the Scythe, Kusanagi can sometimes kill it in one hit with Critical as well. Goryo can technically be killed by a chainsaw, but you would have to have over 160 strength, or about 140 + lots of Power MAGI. The only character that can achieve this is a Robot/Cyborg.

MAGI obtained:

- Defeating Goryo will grant you the Masmune MAGI. Sadly, the Masmune isn't as powerful as your other attacks at this point, so you likely won't be using it.

Back to World 11 (Valhalla)

- The final Beast is south of Valhalla Palace (the east exit). When you teleport to Valhalla Palace, you will already be standing on the east side of the palace. Travel straight south, and you will notice a Fairy standing in front of a bridge (the fairy isn't the boss, but you may talk to her). You will also notice a bridge connecting these clouds to the rest of the area that wasn't previously there. Cross the bridge to face the beast!

War Mk.2:

- This will likely be the toughest of the 7 Beasts. War Mk.2 has 40k HP on insane difficulty, 30k on Veteran, and 15k on average.
- The main problem is the primary weapon of War Mk. 2: The Railgun. This will deal 1,100+ every time War Mk.2 uses it, and there is no way to block it. As such, you should expect to lose a character nearly every turn. Other attacks that can be used by War Mk.2 include Beam, Biochem, Nukebomb, and ComVirus. If you get lucky, War Mk.2 will use these moves on you more than Railgun.
- The strategy is to have at LEAST two characters with Life Potions, and another character with the Heart MAGI. Place those characters in the back of the party so they aren't attacked
- as frequently. Don't even bother healing in this battle, unless War Mk.2 uses NukeBomb. The Railgun will one-shot every character anyway, so your goal will be to just have everyone attack. When you lose about 2-3 characters, have one of your characters use a Life Potion to bring them all back. Repeat this process until you have won!
- If you are struggling to deal enough damage, consider purchasing a Railgun of your own back at the Central Temple.

Preparing for King Haniwa:

- Now it's time to return to the Central Temple (don't forget you can take the elevator straight down to the final area without going through the whole temple). This is a great time to do some stat gaining, GP collecting, and item gathering to be successful with the Next boss fight.
- King Haniwa is a huge step above the 7 Beasts, and you will need all the best items to win. The Seven Sword would help you win this upcoming fight, but is not required. Regardless, it can't hurt to hunt Haniwas for that 1/8 chance they will drop a Seven sword, since you will also be getting lots of GP in the process of trying to farm one. Don't stress out if you don't get the sword...
- If you don't already have one, get enough gold to purchase a Railgun. If you don't manage to land yourself a Seven Sword, consider purchasing a second Railgun. King Haniwa will be much easier to defeat with x2 Railguns or x1 Railgun and x1 Seven Sword. Unfortunately, the cheaper Falcon Sword will not be very useful against King Haniwa due to his ability to block it.
- Don't forget to stock up on lots of Life potions! Consider having 3 characters with Life potions - or at least two of them with Life potions and one with the Heart MAGI.
- Consider placing your Monster as the last, or second to last position in the party. The reason for this is explained in the spoiler below.

King Haniwa:

- This battle will involve a lot of strategy to win. King Haniwa has 22,000 HP on insane difficulty, 17,500 on Veteran, and 13,000 on average. This means that King Haniwa will recover approximately 2,200 HP every single turn on insane skill.
- The primary attack of King Haniwa is a new sword called "Asi", which cannot be dodged, and will kill a character in a single hit. The Asi will also block physical attacks as well as reflect magical attacks back to you. For this reason, you do NOT want to use PsiShot, PsiStaff, or any other reflective spell against King Haniwa.
- The Seven Sword is the second most used attack by King Haniwa (more frequently than a normal Haniwa). Other deadly attacks include Flare and Comet. If you get lucky, King Haniwa will waste a turn with X-Bash (O-Weapon should allow your characters to survive X-Bash).
- The best method to win involves equipping two characters in the the back of the party with Railguns and/or a Seven Sword. These two characters (possibly a Robot/Cyborg and Human) will need to be attacking every single turn. If you fail to do over 2,200 damage per turn, King Haniwa will recover his HP. Whenever possible, have a 3rd character attack as well to deal even more damage. The following attacks cannot be blocked by King Haniwa: Railgun, Excalibur, Gungnir, Flare, Trident, PsiBlast, Comet, Whirl, Tornado, and Beam gun. The Seven Sword CAN be blocked by King Haniwa's Asi Sword, but it causes enough damage to be worth using even if it fails half of the time (you will be unlucky if King Haniwa blocks you more than that).
- The other party members who are not attacking, including Dad, should be using Life Potions when necessary. Consider giving Dad 9 Life potions (which takes up 3 slots). Since Dad will be attacked the least, he should be your lifeline against King Haniwa to revive fallen party

members. You can attempt to use your first two characters to attack King Haniwa, but more than anything they will be cannon fodder against King Haniwa's Asi and Seven Sword. You can always have your lead character use an Ancile shield every turn, which will block the Seven Sword and X-Bash (but NOT the Asi). With a little luck, they will survive 2-3 turns before falling.

- You may find it easier to ignore Healing staffs altogether in this battle, and instead have everyone attack. When two or more characters die, have someone use a Life Potion, which will bring all party members back to life as well as Heal those who are alive. Using this strategy will also allow you to defeat King Haniwa faster.

MAJOR SPOILER: Upon defeating King Haniwa, you may or may not be shocked to see him drop meat! Hopefully you have one monster left alive at the end of this battle (consider repeating the battle if not, which you are allowed to do). The reward for eating this meat is transforming your monster into a mighty Haniwa! This transformation is a no-brainer, and should be chosen even over Neptune. You will lose those Life Potions, the Trident, and PsiStaff with Neptune - but you will gain Flare, Comet, Heal, and the ultimate attack: the Seven Sword! The best part of Haniwa's Seven Sword is having all 7 uses that are fully rechargeable!

King Haniwa's reward:

- After defeating King Haniwa, he will hand over a lot of MAGI and explain that he was not the mastermind behind stealing the MAGI. In fact, he was being controlled by the "Dark Lord" along with the rest of the Haniwa. As such, he will request that you free the Haniwa and in turn gives you his ultimate weapon: the Asi sword.

Asi Sword:

- The Asi sword is a single group-attack weapon with unlimited uses like Excalibur, but is far more powerful. It will also block all physical attacks as well as reflect magical attacks. Basically, the Asi is a combination of Excalibur, Defend Sword, and Mirror. Give this to a Human in place of Excalibur. If you have a second Human, give one Excalibur and the other the Asi. If you have no other Human, consider giving the Excalibur to a Robot/Cyborg or Dad. Although Dad's Captain Sword is slightly more powerful against single monsters, Excalibur is better against groups of monsters and cannot be blocked.

Preparing to face Dark Lord:

- King Haniwa mentions traveling back to your hometown for the path to be revealed. Before doing so, you should make sure to restock supplies that you likely used up. Purchase lots of Life Potions, and don't forget to use a Tent or visit an Inn.

Locating Dark Lord:

- Now it is time to go back to your hometown. Warp to the first town, and walk back through the very first cave. Once you arrive on the other side, enter your hometown, go to the school on the north side, and speak to Mr. S; he will tell you about a passage that is now open on Mystic Mountain (speaking to him will also open this passage).
Note: The parents of the 4 main characters do say some new fun stuff (including Mom).
- Now you can either walk to the first village again, or simply use a Door/Pegasus to warp there. Travel north of the first town. Remember that giant mountain? It now has a cave to enter.

Mystic Mountain:

- This cave is only one area, but it's a bit long. You must wrap around a spiral to the very center. It's pretty hard to get lost, since there is only one way to go (and only one possible dead-end if you turn right instead of left at the start).
- The only monster you will encounter here is Haniwa. Thankfully, the encounter rate is very, very low. You will likely only encounter 1-2 Haniwa's the entire walk, if you encounter any at all. You may also simply run from them.
Note: Now is a good time to hunt for that Seven sword if you never got one.

The 7 Beasts revived:

- At the very end of the spiral, you will see a ghost. He will reveal some shocking information, and proceed to punish you for being disobedient. Before you may face the Dark Lord, you must defeat all 7 Beasts again. The catch is you must defeat them all in a row!
- The 7 Beasts are completely unchanged and require the same strategy as before. However, this time you have an important weapon that will help immensely: the Asi Sword. Give your lead character (possibly a Human) the Asi sword and use it every turn against the 7 Beasts. This will effectively block/repel most attacks from the 7 Beasts while also dealing some good damage.
- The rest of the characters should change their roles depending on the beast you face, but you should give your characters in the back of the party those Life Potions (especially Dad). Try to use them sparingly, when you feel you are in trouble.
- Most of the Beasts should be pretty easy with the advanced weapons you now have. If you transformed a monster in your party to the Haniwa, it would be wise to save the Seven Sword for the final battle against War Mk.2.
- At the end of this entire ordeal, your resources may be dwindling, and War Mk.2 is the hardest of the bunch with the Railgun. The Seven Sword will help you immensely in winning this final battle quickly.

Preparation (for the last time):

- Now it's time to prepare for the final battle in the post-game. After you have defeated the 7 Beasts, use a Tent, and make sure you have plenty of Life Potions still. You really should have at least one Seven Sword going into this final battle (your Haniwa monster with a Seven Sword will suffice).

DarkLord:

- The final boss has about 63,000 HP on insane skill, 50,000 on Veteran, and 30,000 on average. DarkLord will also recover 10% of its health every single turn, which is 6,300 in insane difficulty. This may sound impossible, but DarkLord actually has fairly low defense, and lacks O-Weapon.
- The primary attacks used by DarkLord are Scythe, Rune Axe, Critical, and Inferno. There is a very, very slim chance DarkLord will use Flare, which can kill every single character if you are unlucky enough - even if they have 999 HP.
- Have your lead character attack with the Asi sword every turn to block the Scythe and Rune Axe attacks. Otherwise, the Scythe can kill a character every turn. Rune Axe is not as deadly, but can reflect those PSI moves from your Mutant back to them, which will likely kill them. At this point, you mostly have to watch out for Inferno and Critical. Critical will kill a character without fail. Inferno will kill anyone not at full HP, including Dad. Any time you lose a character, use a Life Potion to bring them back, otherwise you won't be able to deal enough damage to kill DarkLord.
- Just remember that you need to be dealing over 6,550 damage every turn. Since DarkLord has low defense and lacks O-Weapon, this is very possible. You should be dealing a lot of damage with those powerful swords. In fact, the Asi Sword equipped on a character with Power MAGI + Paladin Glove + Arthur Armor + Hero Helmet should be dealing well over 3,000 damage every time. The easiest way to pull off a victory is with the Seven Sword + Asi + Some other powerful attacks (Dad's Captain Sword, Excalibur, Gungnir, PsiStaff, Railgun, etc.)
- Although the Railgun will deal some decent damage, a fully beefed up robot/cyborg can probably deal 2,000+ damage with the Gungnir spear, while a Railgun can only deal up to 1,500 damage. If you aren't dealing this much damage, consider sacrificing agility/defense on the robot and instead load them up with strength based weapons/items (Excalibur, Sun Swords, Modules to name a few).
- The Seven Sword can deal anywhere from 4,000-7,000 damage. With some good strategy (and some luck), you will be dealing 11,000-13,000 damage total on the average turn, except when you lose some characters and need to bring them back to life.
- Unless you keep getting unlucky, you should win this battle in about 12-15 turns. The tricky part will be winning this battle after you have drained all 7 uses of the Seven Sword. Unless you happen to have two Seven Swords, this will mean that ALL your characters should be attacking, except the one character using a Life Potion should someone fall. This battle will likely take a handful of tries to pull off, but it is doable!

Return to Isis:

- After you have defeated DarkLord, you will get some new dialog from King Haniwa, Byakko, and Isis. You will also notice there are no more monsters (perhaps DarkLord was controlling all these monsters the whole time?)
- Talking to Isis will give you the option to go back home, thus cueing the credits and ending the post-game content.
- Hope you had fun! :)

END
